Building Services: Water Supply

Pressure Booster Systems

Hya-Eco VP

Main applications

- Pressure boosting

Fluids handled

Pump for handling clean liquids not chemically and mechanically aggressive to the pump materials.

- Drinking water
- Service water
- Cooling water

Operating data

Operating properties

Characteristic	Value	
Flow rate	Q [m³/h]	≤ 70 with a max. of 3 pumps ¹⁾
	Q [l/s]	≤ 19.5 with a max. of 3 pumps
Head	H [m]	≤ 110
Fluid temperature	T [°C]	≤ 70 ≤ 25 to DIN 1988 (DVGW)
Operating pressure	p [bar]	≤ 16
Inlet pressure	p _{vor} [bar]	≤ 6

Designation

Example: Hya-Eco VP 2 / 0406 / _ _ B

Designation key

Code	Description
Hya-Eco VP	Type series
2	Number of pumps
04	Movitec pump size
06	Number of stages
	Inlet pressure [bar]
B	Design status

Design details

Design

- Fully automatic pressure booster package system
- Baseplate-mounted
- Either two or three vertical high-pressure centrifugal pumps, type Movitec, with oval flange
- One check valve and shut-off valves to DIN/DVGW for each pump
- Anti-vibration pads per pump
- Membrane-type accumulator (direct-flow) to DIN 4807-5 on the discharge side, approved for drinking water
- Pressure transmitter on the discharge side
- Pressure gauge for pressure indication
- Two standard volt-free changeover contacts for fault indication
- Design and function as per DIN 1988-500

Installation type

- Stationary installation

Drive

- Electric motor 60 Hz, 2-pole, IE2, special KSB model, for three-phase mains

Automation

- Control cabinet IP54
- Graphical display with operating panel
- LEDs indicating operational availability and fault of the system
- Service interface for connection to a PC
- Frequency inverter
- Transformer for control voltage
- Motor protection switch per pump
- Lockable master switch (repair switch)
- Pressure transmitter on the discharge side
- Wiring plan to VDE and parts list for electric parts
- Terminal strip/terminals with identification for all connections
- Terminal connection for digital dry running protection
- Remote ON connection
- Remote OFF connection

¹⁾ With stand-by pump as peak load pump

Configuration and function

Hya-Eco VP

1	Control unit	2	Control cabinet
3	Pump	4	Collecting line
5	Baseplate		

Design

Fully automatic pressure booster package system, with 2 to 3 vertical high-pressure pumps and continuously variable speed adjustment of each pump for fully electronic control of the required supply pressure, with two standard volt-free changeover contacts for fault indication.

Function

Automatic mode

Either two or three pumps (3) are controlled and monitored by a micro-processor control unit (1). Each pump is connected to a frequency inverter and controlled by the control unit so as to ensure a constant discharge pressure of the pressure booster system. As the demand increases or decreases, peak load pumps are started and stopped automatically.

As soon as the demand increases again after one pump has been stopped, another pump which has not been in operation before is started up. When the last pump has been stopped and the demand increases again, the next pump in line is started up in variable-speed operation. The stand-by pump is also included in the alternating cycle. The standard setting is for the pressure booster system to start automatically as a function of pressure; the actual pressure is measured by an analog pressure measuring device (pressure transmitter). The function of this pressure transmitter is monitored (live-zero). As long as the pressure booster system is in operation, the pumps are started and stopped as a function of demand (standard setting). In this way it is ensured that the individual pumps operate only in line with the actual demand. The use of variable-speed pumps reduces wear as well as the pumps' frequency of starts in parallel operation. If a duty pump fails, the next pump is started up immediately and a fault is output, which can be reported via volt-free contacts (e.g. to the control station). If the demand drops towards 0, the pressure booster system slowly runs down to the stop point.

The operating status is displayed via LEDs.

Function

Manual mode

In exceptional cases, the system can also be operated in manual mode.

Minimum flow for pump in manual mode

Minimum flow per pump in manual mode

Pump	Minimum flow per pump in manual mode [l/h]
Movitec 2B	200
Movitec 4B	400
Movitec 6B	600
Movitec 10B	1100
Movitec 15B	1600

Materials

Overview of available materials

Component	Material
Inlet casing	Stainless steel
Discharge casing	Stainless steel
Hydraulic system	Stainless steel
Mechanical seal	Complies with EN 12756
Primary ring	Silicon carbide
Mating ring	Hard carbon
Elastomer	EPDM
Baseplate	Steel, powder-coated
Hydraulic design	
Distributor pipe	Stainless steel
Valves	Copper base alloy/brass DVGW-approved
Membrane-type accumulator	Connection made of stainless steel, flow through valve to DIN 4807-5
Membrane	Approved for drinking water

Product benefits

- Energy-efficient operation and constant pressure ensured by speed control of all pumps (all systems non-compliant with Drinking Water Directive, except for single-pump systems)
- Ease of use and fully automatic control by BoosterControl Advanced
- Corrosion-resistant by using high-quality stainless steel
- Ready-to-connect baseplate-mounted package system
- Pumps mounted on the baseplate on anti-vibration pads
- Suitable for drinking water installations, manufactured under stringent hygienic conditions

Selection information

Requirements:

Flow rate 4 m³/h

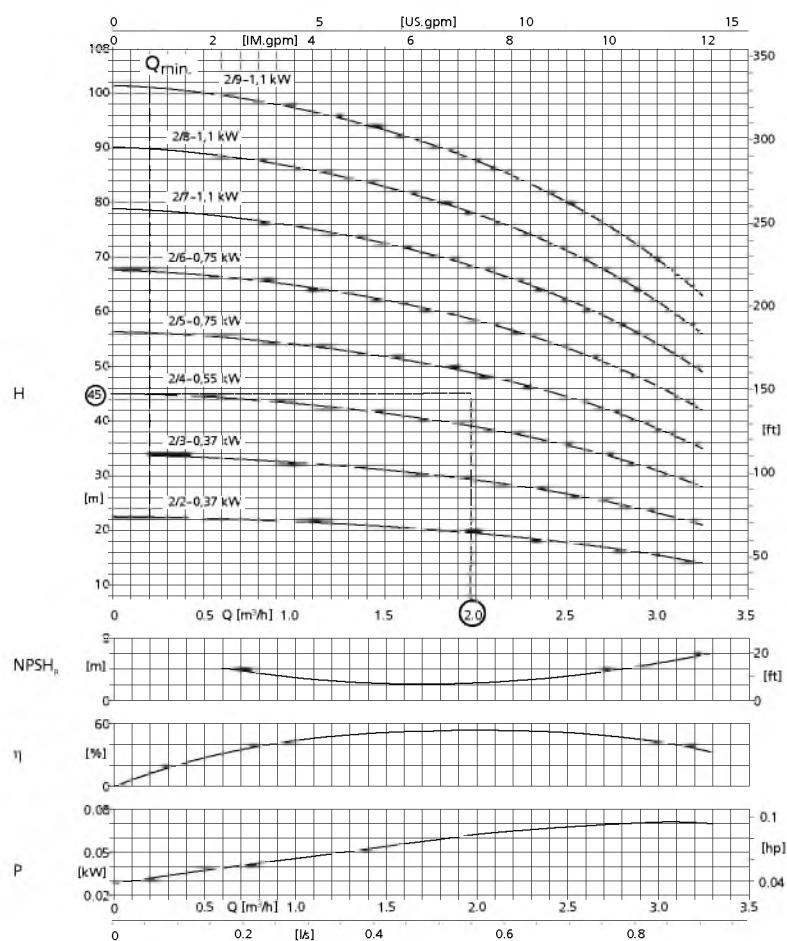

Start-up pressure 4.5 bar

Requested stand-by pump to DIN 1988

Solution:

Hya Eco-VP 2/0205 B

1. According to the table *Flow rate as a function of the number of pumps* the system may comprise 1 or 2 duty pumps (as stand-by pump is requested)
2. According to the table *Flow rate as a function of the number of pumps* the flow rate requirement can be either 4 m³/h (1 duty pump) or 2 m³/h (2 duty pumps)
3. The characteristic curves accordingly suggest Hya-Eco VP 2/205 (operating point close to Q_{opt})

The required flow rate is split according to the number of the duty pumps (not taking into account any stand-by pumps).

Flow rate as a function of the number of pumps

Duty pumps	Stand-by pumps	Flow rate as a function of the number of pumps
1	1	Required flow rate \triangleq flow rate as per characteristic curve Q [m ³ /h]
2	0	Required flow rate / 2 \triangleq flow rate as per characteristic curve Q [m ³ /h]
2	1	Required flow rate / 2 \triangleq flow rate as per characteristic curve Q [m ³ /h]
3	0	Required flow rate / 3 \triangleq flow rate as per characteristic curve Q [m ³ /h]

Scope of supply

Depending on the model, the following items are included in the scope of supply:

Pressure booster system

- Two to three vertical high-pressure centrifugal pumps (standard pumps)
- Membrane-type accumulator on the discharge side, approved for drinking water
- Pressure transmitter on the discharge side
- Pressure gauge
- Powder-coated steel baseplate
- Pumps mounted on the baseplate with anti-vibration mounts

Per pump:

- Check valve
- Shut-off valves

Control cabinet

- Control cabinet IP54
- Pump control and monitoring unit
- Graphical display with operating panel
- LEDs indicating operational availability and fault of the pressure booster system
- Service interface for connection to a PC
- Transformer for control voltage
- Motor protection switch per pump
- Lockable master switch (repair switch)
- Terminal strip/terminals with identification for all connections
- Circuit diagram, settings for frequency inverters and list of electrical components

- Connection for analog or digital dry running protection equipment
- External connection ON
- External connection OFF

Accessories

See the separate type series booklet Accessories for Pressure Booster Systems 1954.5.

Designation key

Code	Description
Hyamat	Pressure booster system
SVP	All pumps in variable-speed operation
4	Number of pumps
04	Pump size
08	Number of pump stages
1,2	Min. inlet pressure [bar]
3,5	Max. usable inlet pressure [bar]

Design details

Design

- Fully automatic pressure booster package system
- Baseplate-mounted
- Two to six vertical high-pressure centrifugal pumps with continuously variable speed adjustment
- Hydraulic components made of stainless steel / brass
- One check valve and shut-off valves to DIN/DVGW for each pump
- Anti-vibration mounts for each pump for systems with Movitec 2B, 4B, 6B, 10B, 15B
- Systems with level-adjustable feet with rubber pads (supplied but not fitted) for systems with Movitec 25B, 40B, 60B and 90B
- Membrane-type accumulator (direct-flow) to DIN 4807-5 on the discharge side, approved for drinking water
- Pressure gauge for pressure indication
- Pressure transmitter on the discharge side
- Design and function as per DIN EN 806-2, DIN 1988-500

Installation type

- Stationary installation

Drive

- High-efficiency magnet-less KSB-SuPremE-IE4 motor (as per IEC/CD 60034-30 Ed. 2)

Automation

- Control cabinet IP54
- Pump control and monitoring unit
- Graphical display with operating panel
- LEDs indicating operational availability and fault of the system
- Service interface for connection to a PC
- Frequency inverter
- Transformer for control voltage
- Motor protection switch per pump
- Lockable master switch (repair switch)
- Pressure transmitter on the discharge side
- Wiring plan to VDE and parts list for electric parts
- Terminal strip/terminals with identification for all connections

¹⁾ With stand-by pump as peak load pump

- Connection for analog or digital dry running protection equipment
- External ON/OFF connection
- Field bus connection (optional)

Configuration and function

Design

The fully automatic pressure booster system is equipped with two to six vertical high-pressure pumps (4) (all of which are speed-controlled) for pumping the fluid handled to the consumer installations in the set pressure range.

Function

Automatic mode

Two to six pumps (4) are controlled and monitored by a microprocessor control unit (1). Each pump is connected to a frequency inverter and controlled by the control unit so as to ensure a constant discharge pressure of the pressure booster system. As the demand increases or decreases, peak load pumps are started and stopped automatically.

As soon as the demand increases again after one pump has been stopped, another pump which has not been in operation before is started up. When the last pump has been stopped and the demand increases again, the next pump in line is started up in variable-speed operation. The stand-by pump is also included in the alternating cycle. The standard setting is for the pressure booster system to start automatically as a function of pressure; the actual pressure is measured by an analog pressure measuring device (pressure transmitter). The function of this pressure transmitter is monitored (live-zero). As long as the pressure booster system is in operation, the pumps are started and stopped as a function of demand (standard setting). In this way it is ensured that the individual pumps operate only in line with the actual demand. The use of variable-speed pumps reduces wear as well as the pumps' frequency of starts in parallel operation. If a duty pump fails, the next pump is started up immediately and a fault is output, which can be reported via volt-free contacts (e.g. to the control station). If the demand drops towards 0, the pressure booster system slowly runs down to the stop point.

The operating status is displayed via LEDs.

Function

Energy-saving mode

In conjunction with a very large discharge-side accumulator, the energy-saving mode prevents the pressure booster system from running at the least efficient operating point, supplying very small amounts of water.

If very small amounts of water are consumed the pressure booster system only fills the downstream accumulator and stops.

Any small water volumes required can then be supplied from the accumulator.

Function

Manual mode

Depending on the equipment the pressure booster system is supplied with, the pumps can be operated in manual mode in either one or two different ways.

Standard: By making the appropriate settings at the display, one of the pumps can be operated directly via the mains for 10 seconds, independently of the control unit. The pump will then automatically return to OFF mode.

Supplementary equipment: Manual-0-automatic selector switches can be supplied as supplementary equipment. They can be used to operate each pump directly on mains power.

In manual mode, a minimum flow (see table below) is essential to prevent the fluid handled and the pump from overheating when no water is consumed at the consumer installations.

Minimum flow for pump in manual mode

Minimum flow per pump in manual mode

Pump	Minimum flow per pump in manual mode [l/h]
Movitec 2B	200
Movitec 4B	400
Movitec 6B	600
Movitec 10B	1100
Movitec 15B	1600
Movitec 25B	2800
Movitec 40B	4600
Movitec 60B	6100
Movitec 90B	8500

Example

An open $\frac{1}{2}$ -inch tap equals a water consumption of approx. 800 to 1,200 l/h.

Dry running protection (supplementary equipment)

To protect the system from dry running, a range of protective equipment (see Supplementary equipment / Accessories) is available for various installation conditions.

Digital or analog lack-of-water monitoring equipment can be connected to the corresponding terminals.

Field bus connection (supplementary equipment)

For remote monitoring of all system-relevant parameters and connection to a control station the system can optionally be supplied fitted with a field bus module.

Materials

Overview of available materials

Component	Material
Pump casing	Stainless steel
Shroud	Stainless steel
Hydraulic system	Stainless steel

Component	Material
Mechanical seal	Complies with EN 12756
Primary ring	Silicon carbide
Mating ring	Hard carbon
Elastomer	EPDM
Baseplate	Steel, with powder or paint coating
Hydraulic design	
Manifold	Stainless steel
Valves	Copper-base alloy / brass or nodular cast iron / EPDM DVGW-approved Approved for drinking water
Accumulator	Connection made of stainless steel, flow through valve to DIN 4807-5
Membrane	Approved for drinking water

Product benefits

- Energy-efficiency optimised by high-efficiency magnet-less KSB-SuPremE-IE4 motor (to IEC/CD 60034-30 Ed. 2) and energy-saving function
- Ready-to-connect, supplied pre-set and tested for functionality
- User-friendly, straightforward menu navigation
- Reliable operation by corrosion-resistant internal parts
- Suitable for drinking water installations, manufactured under stringent hygienic conditions
- Hydraulic components made of stainless steel / brass

Selection information

Selecting the pressure booster system

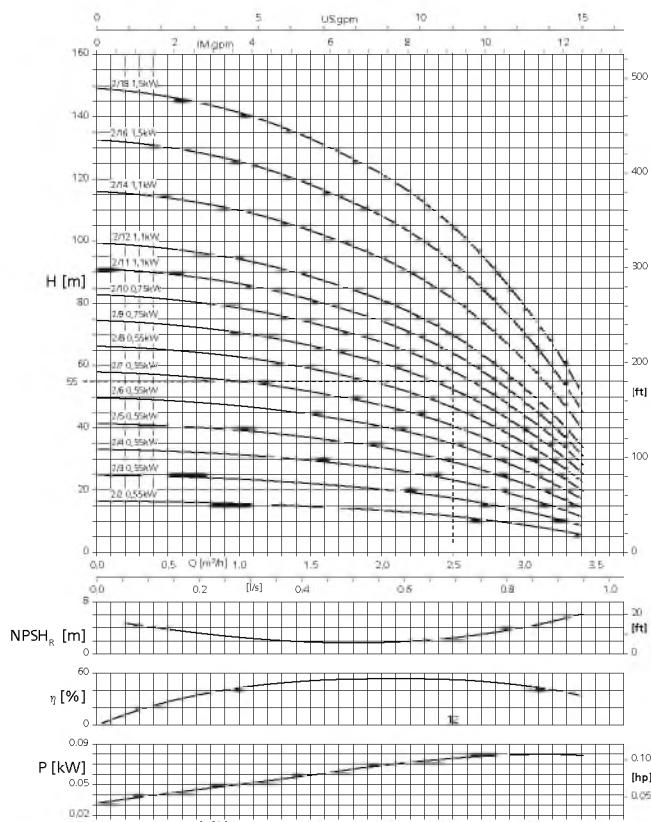

Requirements:

Flow rate 10 m³/h
Start-up pressure 5.5 bar
Stand-by pump to DIN 1988

Solution:

Hyamat SVP 5/0210 B

- According to the table *Flow rate as a function of the number of pumps* the system may comprise either 2 or 3 duty pumps (as stand-by pump is requested)
- According to the table *Flow rate as a function of the number of pumps* the flow rate requirement can be either 24.4 m³/h (2 duty pumps) or 12.2 m³/h (1 duty pump)
- The characteristic curves accordingly suggest Hyamat SVP 5/0210 B (operating point close to Q_{opt})

The flow rate in the characteristic curve is based on one duty pump:

The flow rate of a stand-by pump, if any, is not taken into account when calculating the flow rate required.

Flow rate as a function of the number of pumps

Number of duty pumps	With stand-by pump	Flow rate indicated in the diagram
1	No	Flow rate [Q] as shown in characteristic curve
1	Yes	Flow rate [Q] as shown in characteristic curve
2	No	Flow rate required divided by 2 = flow rate in characteristic curve [Q]
2	Yes	Flow rate required divided by 2 = flow rate in characteristic curve [Q]
3	No	Flow rate required divided by 3 = flow rate in characteristic curve [Q]
3	Yes	Flow rate required divided by 3 = flow rate in characteristic curve [Q]
4	No	Flow rate required divided by 4 = flow rate in characteristic curve [Q]
4	Yes	Flow rate required divided by 4 = flow rate in characteristic curve [Q]
5	No	Flow rate required divided by 5 = flow rate in characteristic curve [Q]
5	Yes	Flow rate required divided by 5 = flow rate in characteristic curve [Q]
6	No	Flow rate required divided by 6 = flow rate in characteristic curve [Q]

Determining the power input

- The power input is indicated per stage ($St = 1$) and/or per stage with a smaller impeller ($St = -1$).

The pump input power can be calculated accordingly.

Calculation: value indicated in the diagram ($St = 1$) \times number of stages + value indicated in the diagram ($St = -1$) \times number of stages with a smaller impeller

Example 1, Movitec 90/4: $P = (St = 1) \times 4$

Example 2, Movitec 90/4-1: $P = (St = 1) \times 3 + (St = -1)$

Example 3, Movitec 90/4-2: $P = (St = 1) \times 2 + (St = -1) \times 2$

Control cabinet – Hyamat SVP with Movitec 2B / 4B / 6B / 10B / 15B / 25B / 40B / 60B / 90B

Control cabinet dimensions for Hyamat SVP [mm]

The control cabinet dimensions refer to systems in the standard design. Larger control cabinets may be required for installing other optional equipment.

Combinations of Hyamat SVP systems and control cabinet dimensions

Scope of supply

Depending on the model, the following items are included in the scope of supply:

Pressure booster system

- Two to six vertical high-pressure centrifugal pumps (standard pumps)

For Movitec 2B, 4B, 6B, 10B and 15B:

- With oval/round flange

For Movitec 25B, 40B, 60B and 90B:

- With round flange
- Membrane-type accumulator on the discharge side, approved for drinking water
- Pressure transmitter on the discharge side
- Pressure gauge
- Powder-coated / epoxy resin-coated steel baseplate

For Movitec 2B, 4B, 6B, 10B and 15B:

- Pumps mounted on the baseplate with anti-vibration mounts

For Movitec 25B, 40B, 60B and 90B:

- Pressure booster system with level-adjustable feet and rubber pads (supplied but not fitted)

Per pump:

- Check valve
- Shut-off valves

Control cabinet

- Control cabinet IP54
- Pump control and monitoring unit
- Graphical display with operating panel
- LEDs indicating operational availability and fault of the pressure booster system
- Service interface for connection to a PC
- Transformer for control voltage
- Motor protection switch per pump

- Lockable master switch (repair switch)
- Terminal strip/terminals with identification for all connections
- Circuit diagram and list of electric components
- Connection for analog or digital dry running protection equipment
- External connection ON
- External connection OFF

Accessories

 See the separate type series booklet Accessories for Pressure Booster Systems 1954.5.

Building Services: Water Supply

Pressure Booster Systems

Hya-Solo D / DSV

Hya-Solo D

Hya-Solo DSV

Main applications

- Spray irrigation systems
- General irrigation systems
- Service water supply systems
- Domestic water supply
- Rainwater harvesting
- Water supply systems

Fluids handled

- Drinking water
- Service water
- Cooling water
- Fluids not chemically or mechanically aggressive to the materials

Operating data

Operating properties

Characteristic	Value	
Flow rate	Q [m³/h]	≤ 110
	Q [l/s]	≤ 30.6
Head	H [m]	≤ 160
Fluid temperature	T [°C]	≤ 70
Operating pressure	p [bar]	≤ 16

Designation

Example: Hya-Solo D 1 / 0405 / 2 B

Designation key

Code	Description
Hya-Solo	Type series
D	Three-phase current
1	Number of pumps
04	Pump size
05	Number of pump stages
2	Inlet pressure [bar] (for DSV, from - to)
B	Design status

Design details

Design

Hya-Solo D

- Fully automatic pressure booster package system
- Membrane-type accumulator (direct-flow) to DIN 4807-5 on the discharge side, approved for drinking water
- Pressure gauge for pressure indication

Hya-Solo DSV

- Fully automatic pressure booster package system
- Membrane-type accumulator (direct-flow) to DIN 4807-5 on the discharge side, approved for drinking water
- Pressure gauge for pressure indication

Installation type

- Stationary installation

Drive

Hya-Solo D

- Three-phase asynchronous squirrel-cage motor
- Efficiency class IE3
- 220-240 V / 380-420 V ; 380-420 V / 660-720 V
- IP55 enclosure
- Thermal class F
- DOL starting up to and including 4 kW
- Star-delta starting for 5.5 kW and above

Hya-Solo DSV

- KSB SuPremE IE4 motor (as per IEC/CD 60034-30 Ed. 2)
- Three-phase motor
- 380 V AC -10% up to 480 V AC +10%, 50/60 Hz
- IP55 enclosure

Automation

Hya-Solo D

- Control unit for pressure-controlled starting and stopping
- Control cabinet IP54
- LEDs indicate faults and lack of water (red)
- Motor protection switch
- Manual-0-automatic selector switch
- Timer for daily operation check run
- Terminal strip with markings for all connections
- Volt-free contacts for operation, fault, lack of water
- Remote ON/OFF
- Lockable master switch (repair switch)

Hya-Solo DSV

- Self-cooling motor-mounted frequency inverter (PumpDrive) for pressure-controlled starting and demand-based stopping
- Plain-text display (for voltage, current, power, speed, frequency)
- Control panel with operating keys (manual-0-automatic), navigation and function keys
- LEDs signalling operational availability (green), warning (yellow), alert (red)
- Two freely parameterisable relay outputs (operation/fault, alert, etc.)
- Analog input for external setpoint adjustment

- Analog output for transmitting the actual value, motor speed, etc.
- Control cabinet IP54
- Lockable master switch (repair switch)

Materials

Overview of available materials

Component	Material
Pump	
Pump casing	Stainless steel
Pump shroud	Stainless steel
Hydraulic system	Stainless steel
Sealing element	EPDM
Plain bearing	Aluminium oxide
Mechanical seal	To EN 12756
Primary ring	Silicon carbide
Mating ring	Hard carbon
Elastomer	EPDM
Piping	
Hya-Solo D/DSV	Chrome steel
PumpDrive housing	
Heat sink	Die-cast aluminium
Casing cover	PBT, glass fibre reinforced
Accumulator	Connection made of stainless steel, flow through valve to DIN 4807-5
Membrane	Approved for drinking water

Product benefits

- Corrosion-resistant by using high-quality stainless steel
- Very compact, space-saving design

Hya-Solo DSV

- Saves energy through efficient operating mode

Selection information

Selecting the pressure booster system

Selection example

Requirements:

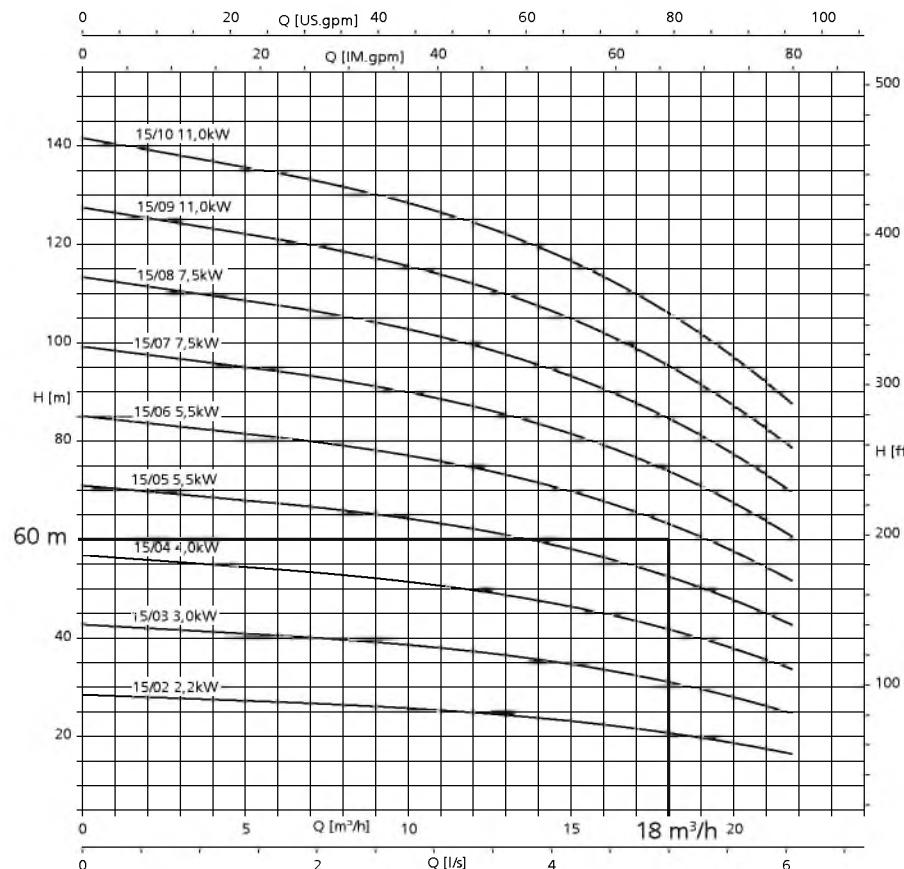

Specified duty point at:

- Flow rate: $18 \text{ m}^3/\text{h}$
- Head: 60 m

Solution:

1. The values are transferred to the selection chart to select the most suitable pump.

⇒ At an inlet pressure $p_{in} = 0 \text{ bar}$: Movitec 15/06 => Hya-Solo D / 1506/0

Determining the power input

- The power input is indicated per stage ($St = 1$) and/or per stage with a smaller impeller ($St = -1$).

The pump input power can be calculated accordingly.

Calculation: value indicated in the diagram ($St = 1$) × number of stages + value indicated in the diagram ($St = -1$) × number of stages with a smaller impeller

Example 1, Movitec 90/4: $P = (St = 1) \times 4$

Example 2, Movitec 90/4-1: $P = (St = 1) \times 3 + (St = -1)$

Example 3, Movitec 90/4-2: $P = (St = 1) \times 2 + (St = -1) \times 2$

Technical data

Hya-Solo D

Selection table

Hya-Solo D	P _N	I _N		Connection Suction side - Discharge side

St = 1 | P per stage

Hya-Solo D with Movitec 25B, n = 2900 rpm

St = 1 | P per stage

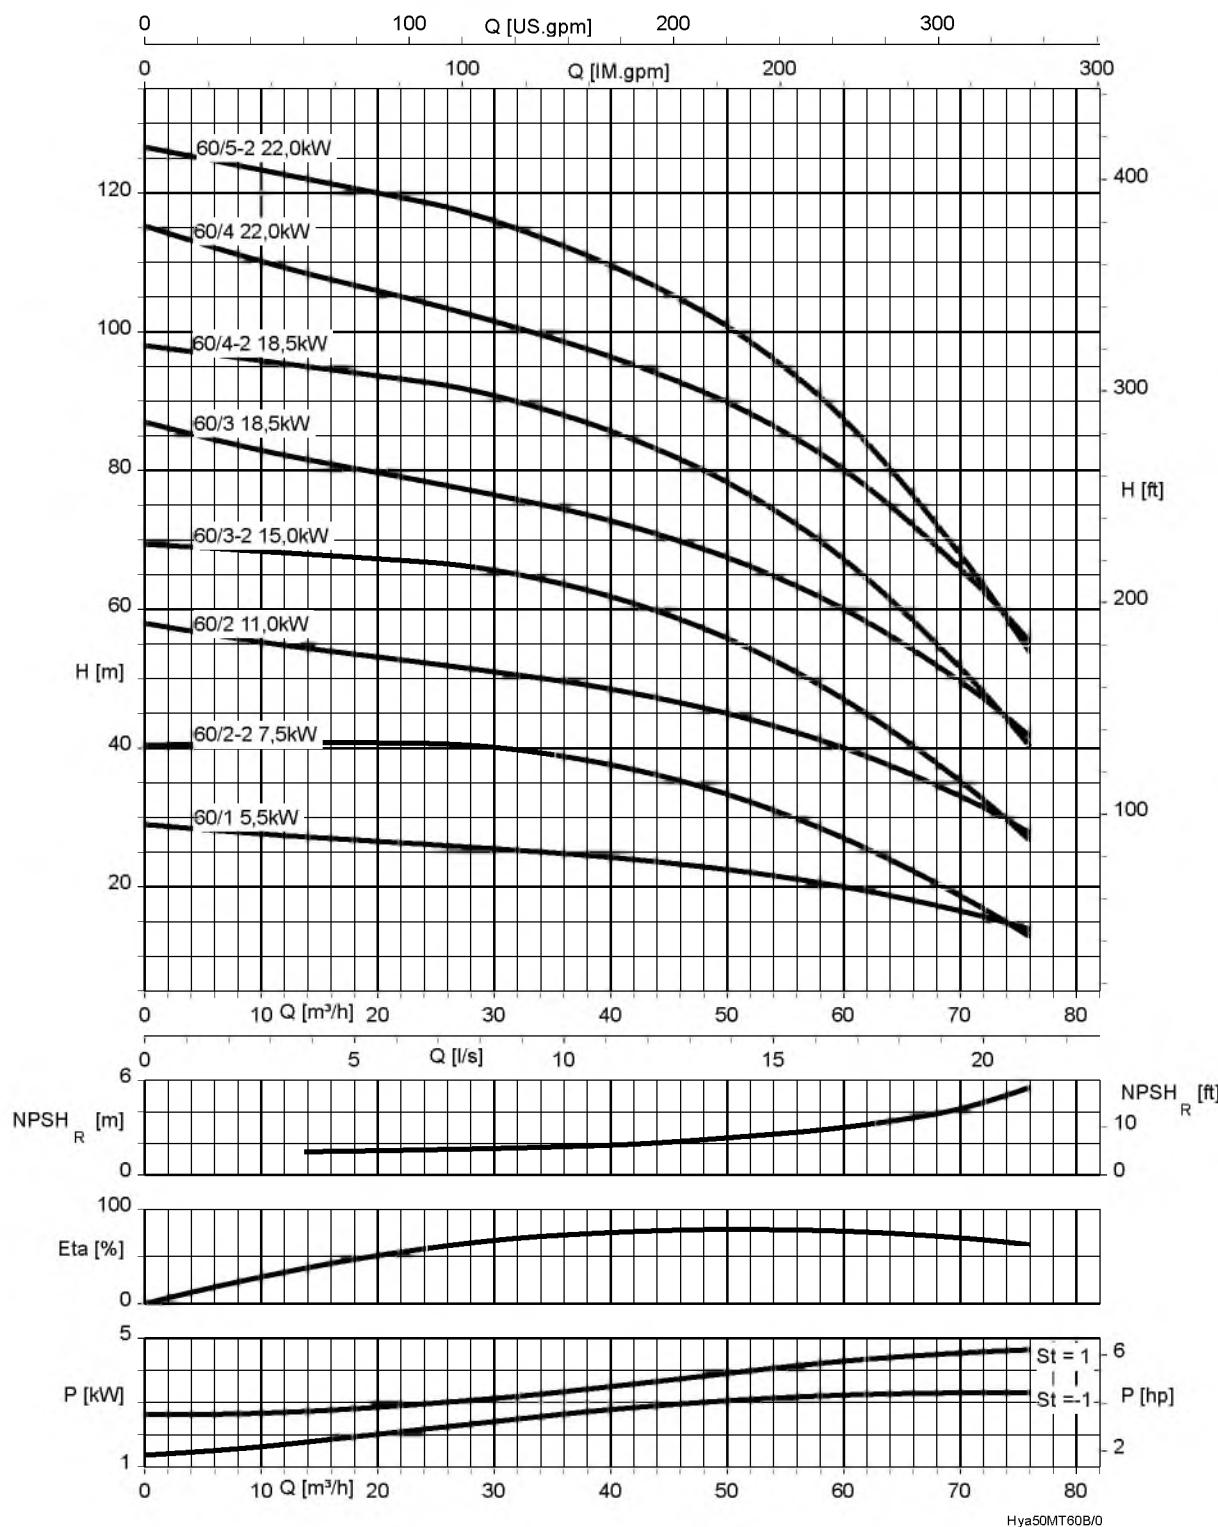

Hya-Solo D with Movitec 40B, n = 2900 rpm

St = 1 | P per stage

St = -1 | P per stage with a smaller impeller

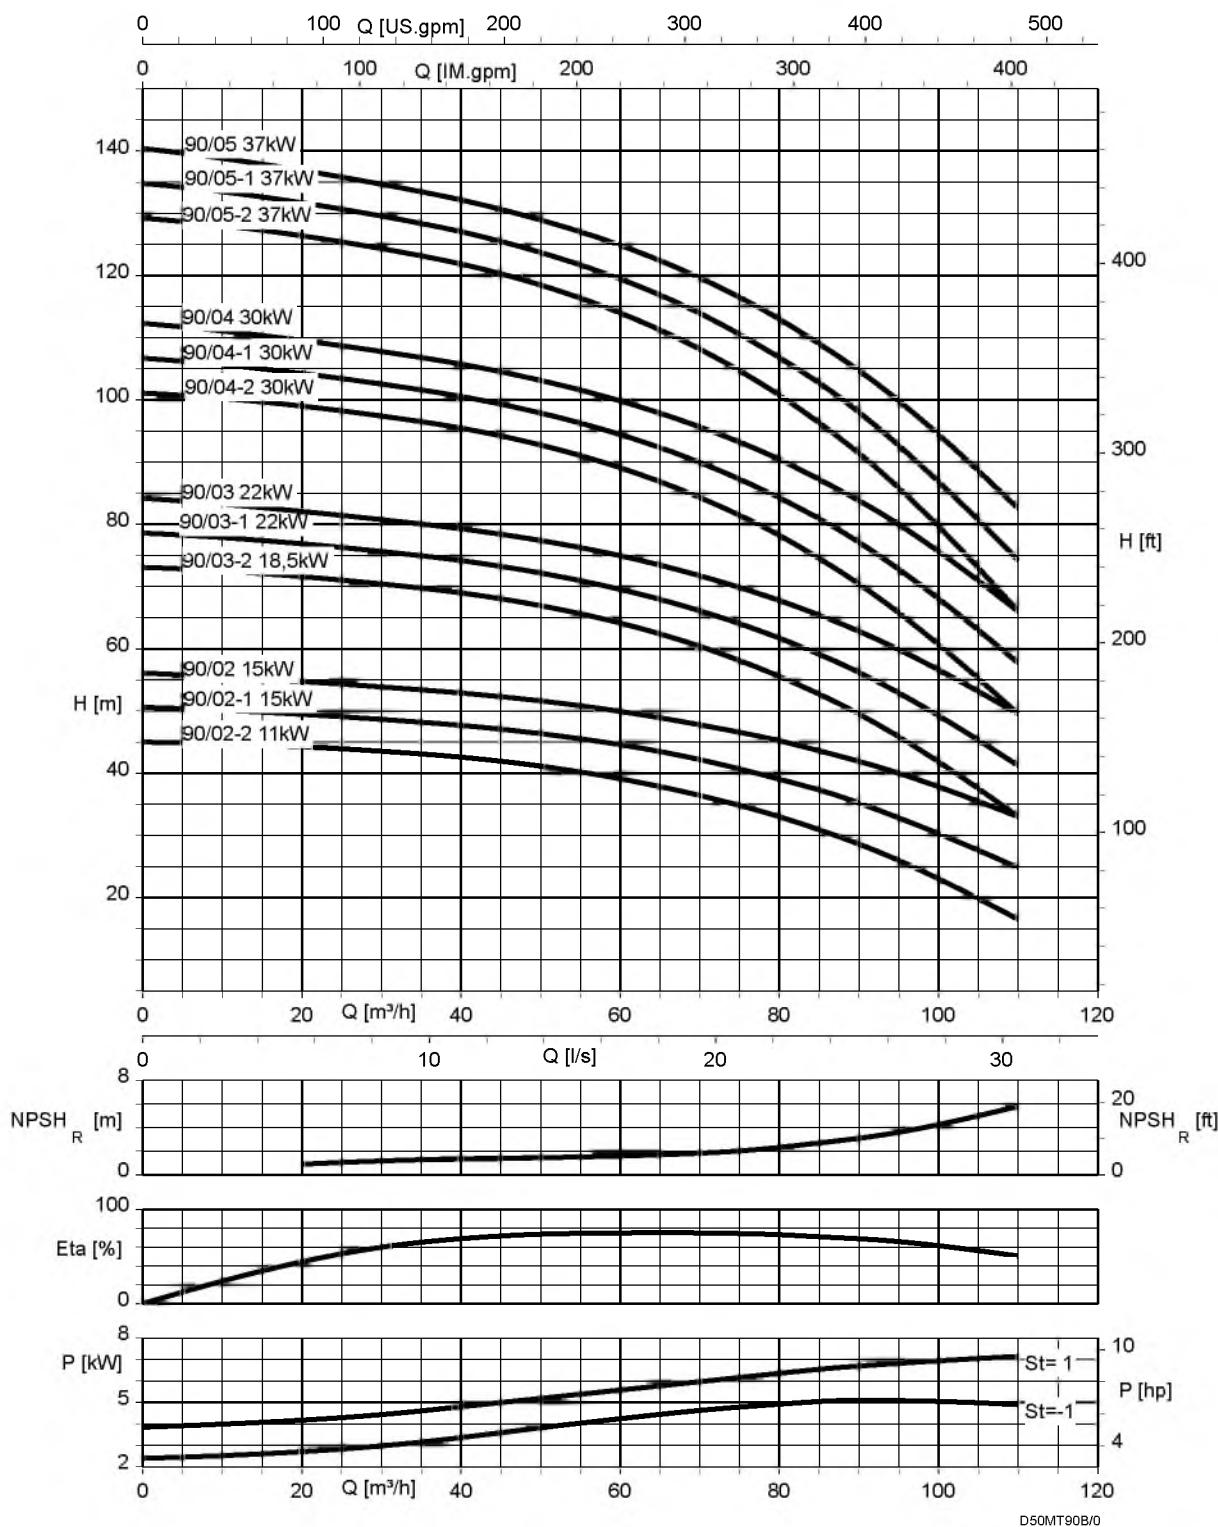

Hya-Solo D with Movitec 60B, n = 2900 rpm

St = 1 | P per stage

St = -1 | P per stage with a smaller impeller

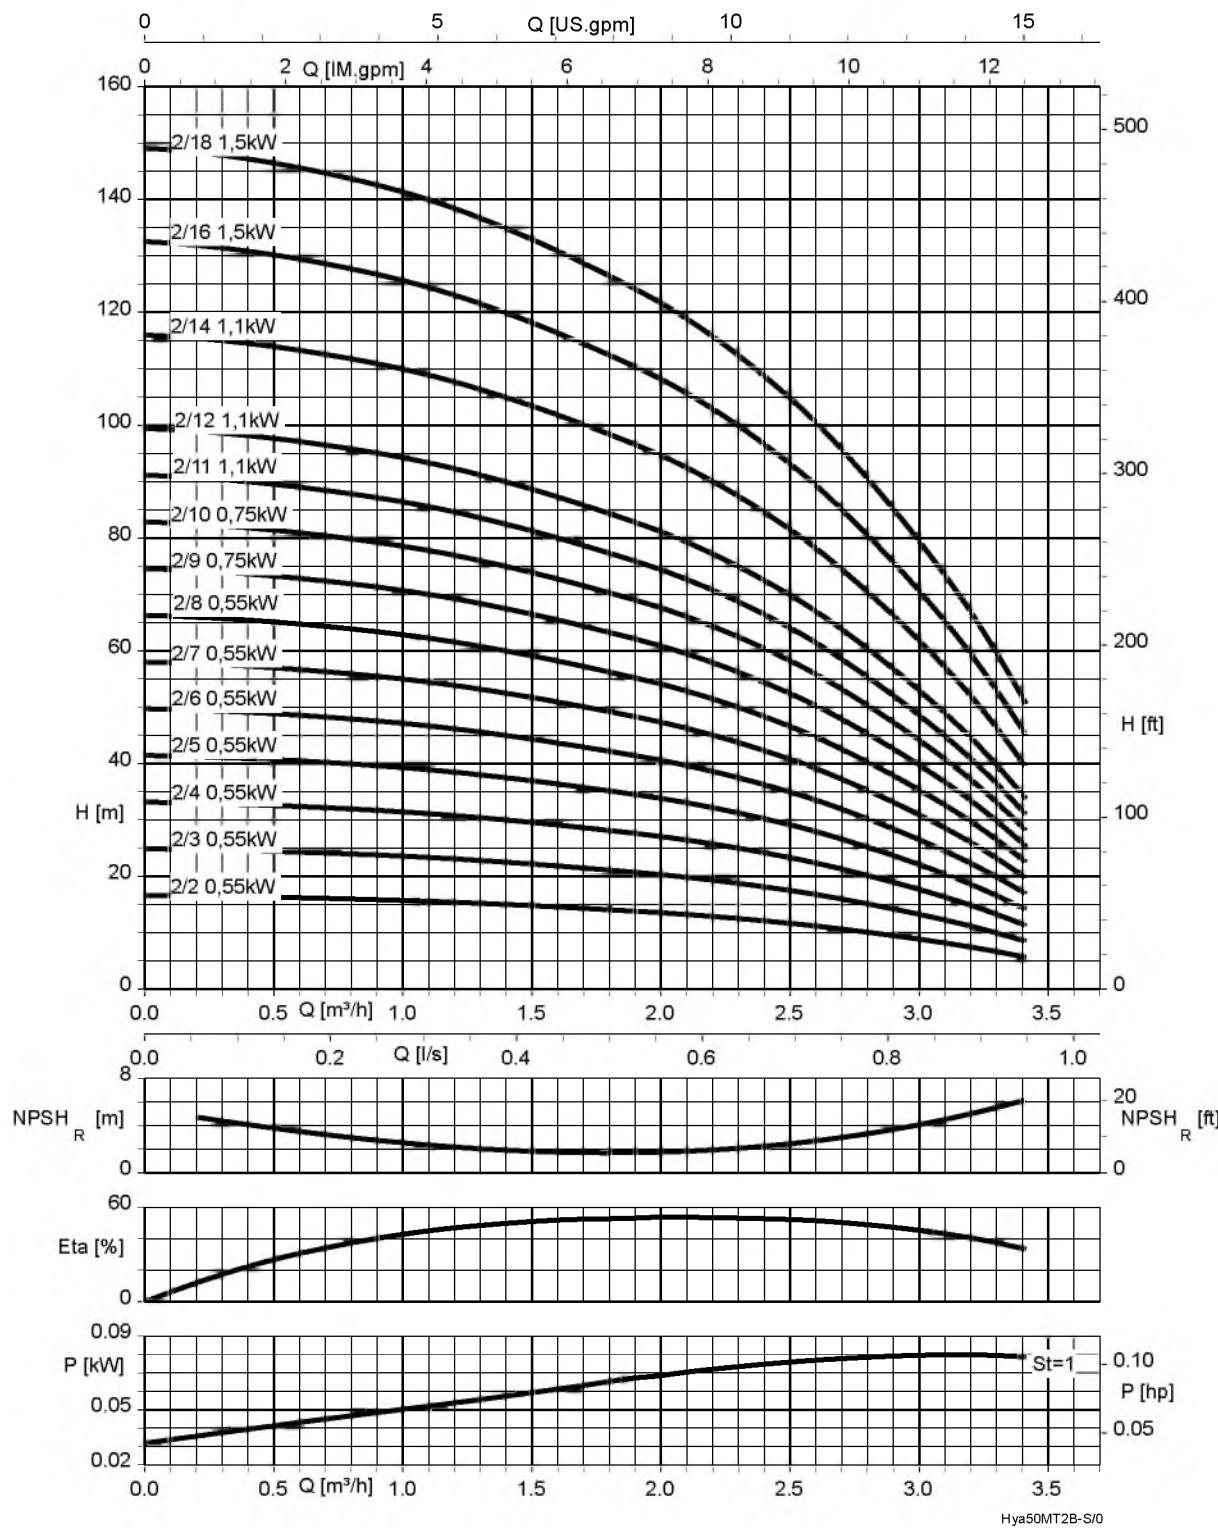

Hya-Solo D with Movitec 90B, n = 2900 rpm

St = 1 | P per stage

St = -1 | P per stage with a smaller impeller

Hya-Solo DSV with Movitec 2B, n = 3000 rpm

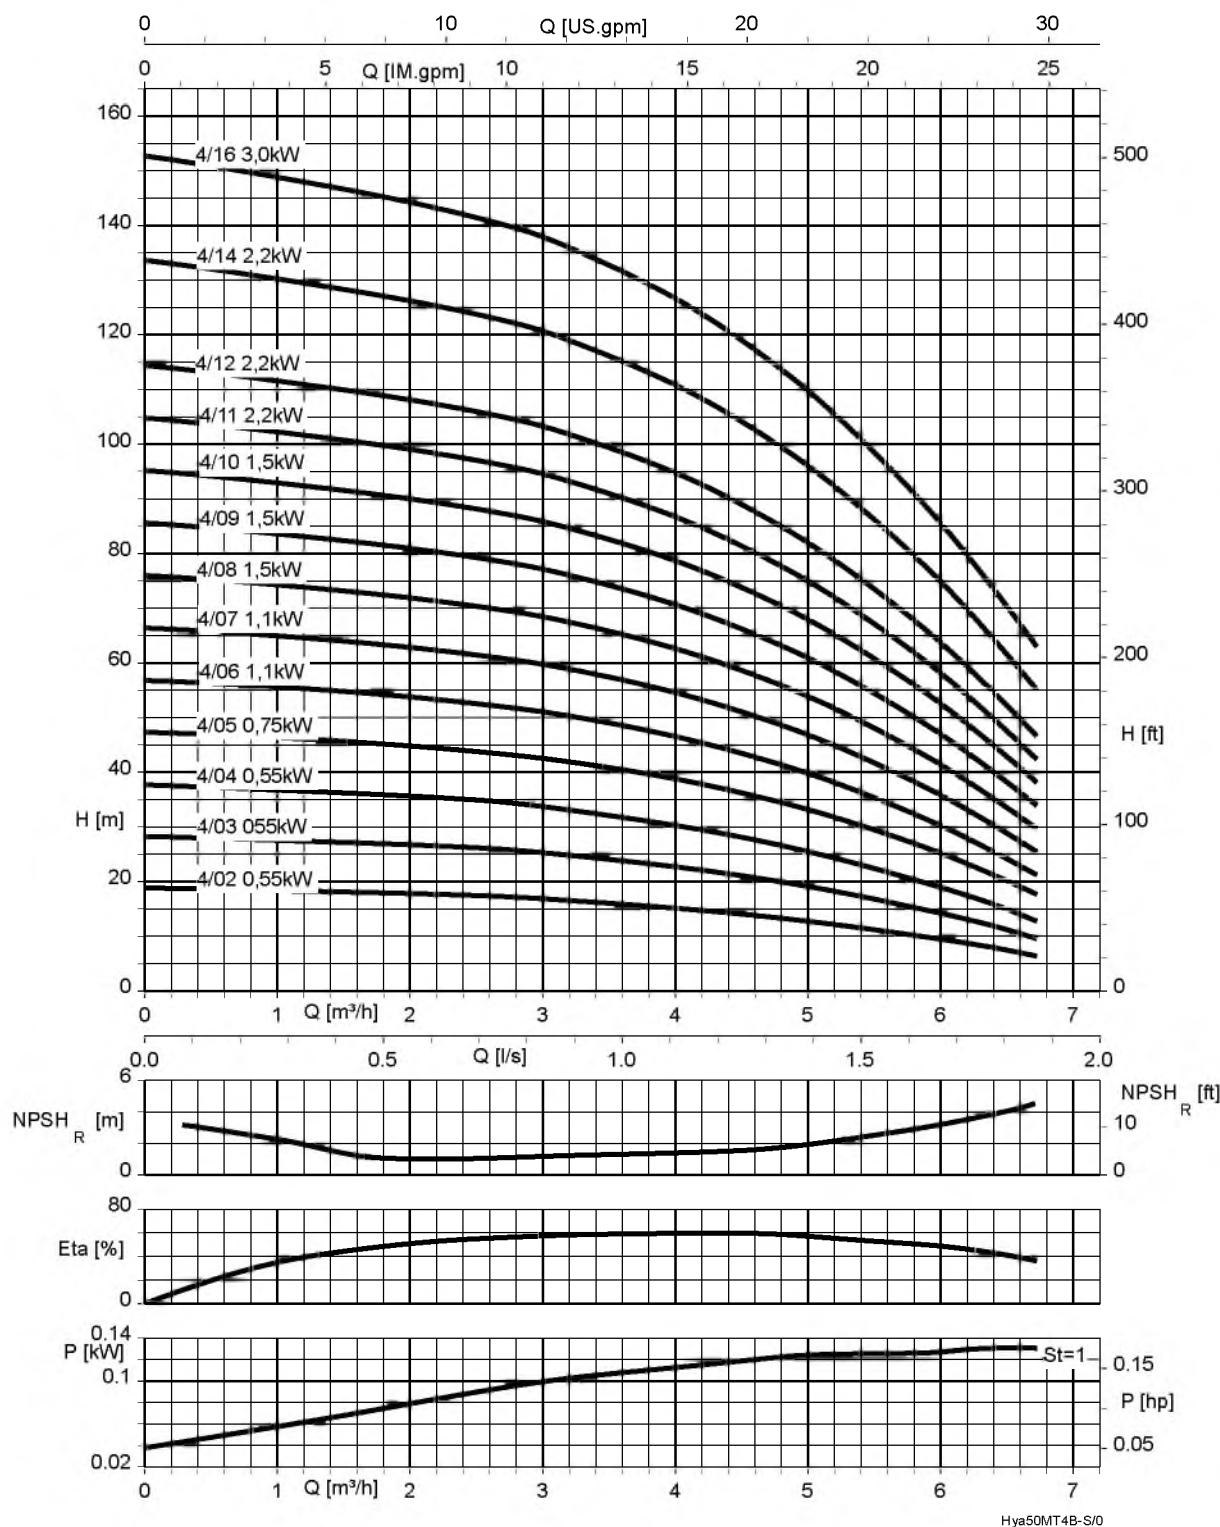

Systems with 8 and 10 stages

The actual curve will deviate from the documented curve due to the reduced speed. An accurate selection can only be made with KSB's selection program KSB EasySelect.

St = 1 | P per stage

Hya-Solo DSV with Movitec 4B, n = 3000 rpm

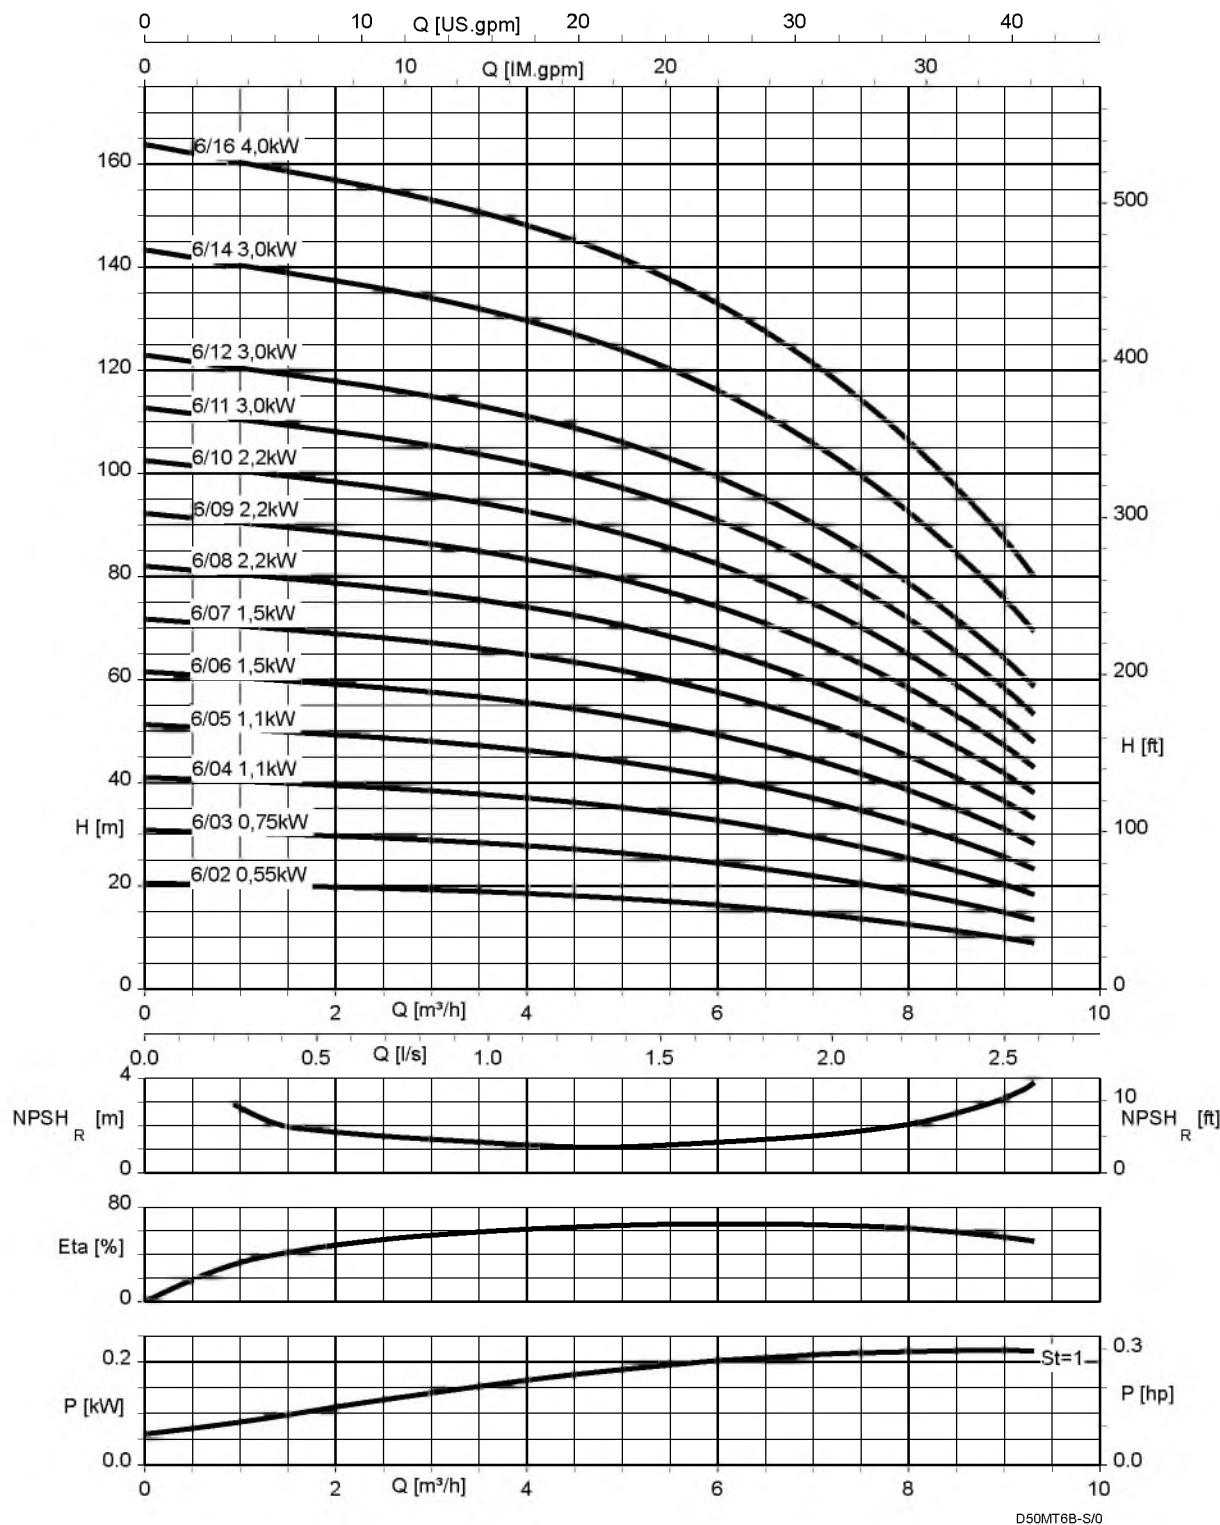

Systems with 4, 5 and 10 stages

The actual curve will deviate from the documented curve due to the reduced speed. An accurate selection can only be made with KSB's selection program KSB EasySelect.

St = 1 | P per stage

Hya-Solo DSV with Movitec 6B, n = 3000 rpm

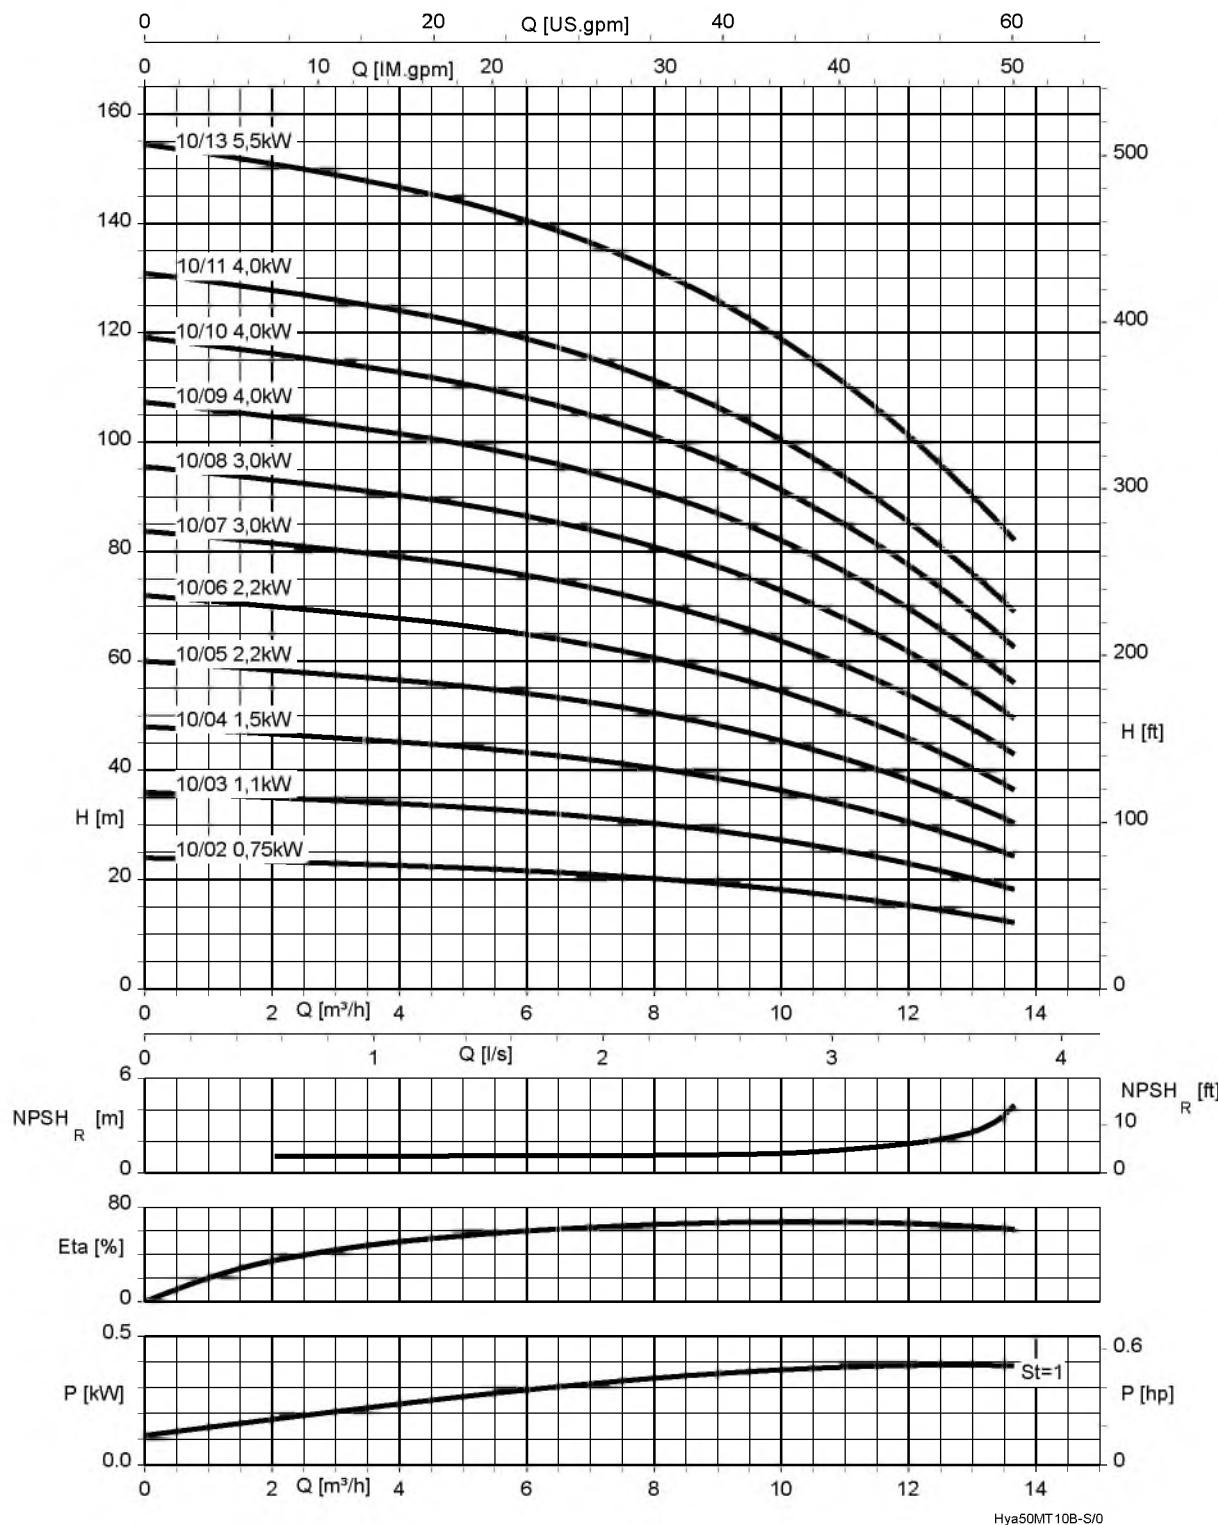

Systems with 2, 14 and 16 stages

The actual curve will deviate from the documented curve due to the reduced speed. An accurate selection can only be made with KSB's selection program KSB EasySelect.

St = 1 | P per stage

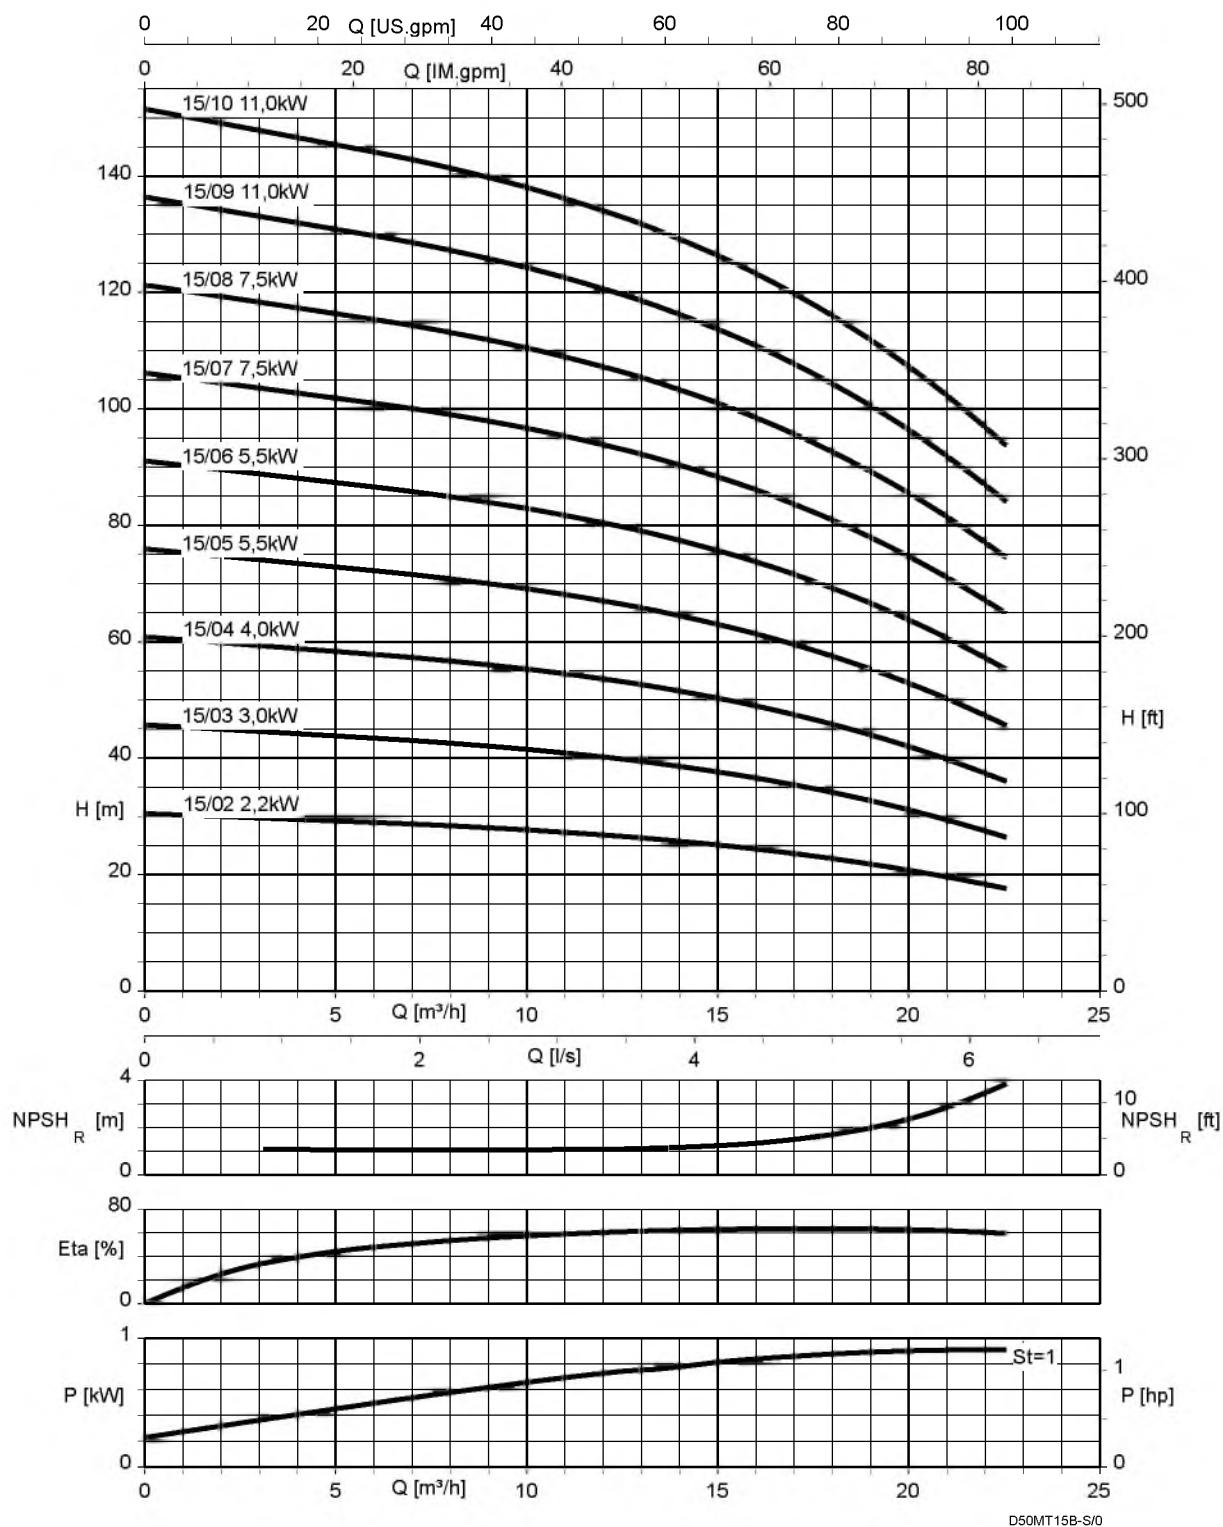

Hya-Solo DSV with Movitec 10B, n = 3000 rpm

i Systems with 2, 3, 4, 8 and 11 stages
 The actual curve will deviate from the documented curve due to the reduced speed. An accurate selection can only be made with KSB's selection program KSB EasySelect.

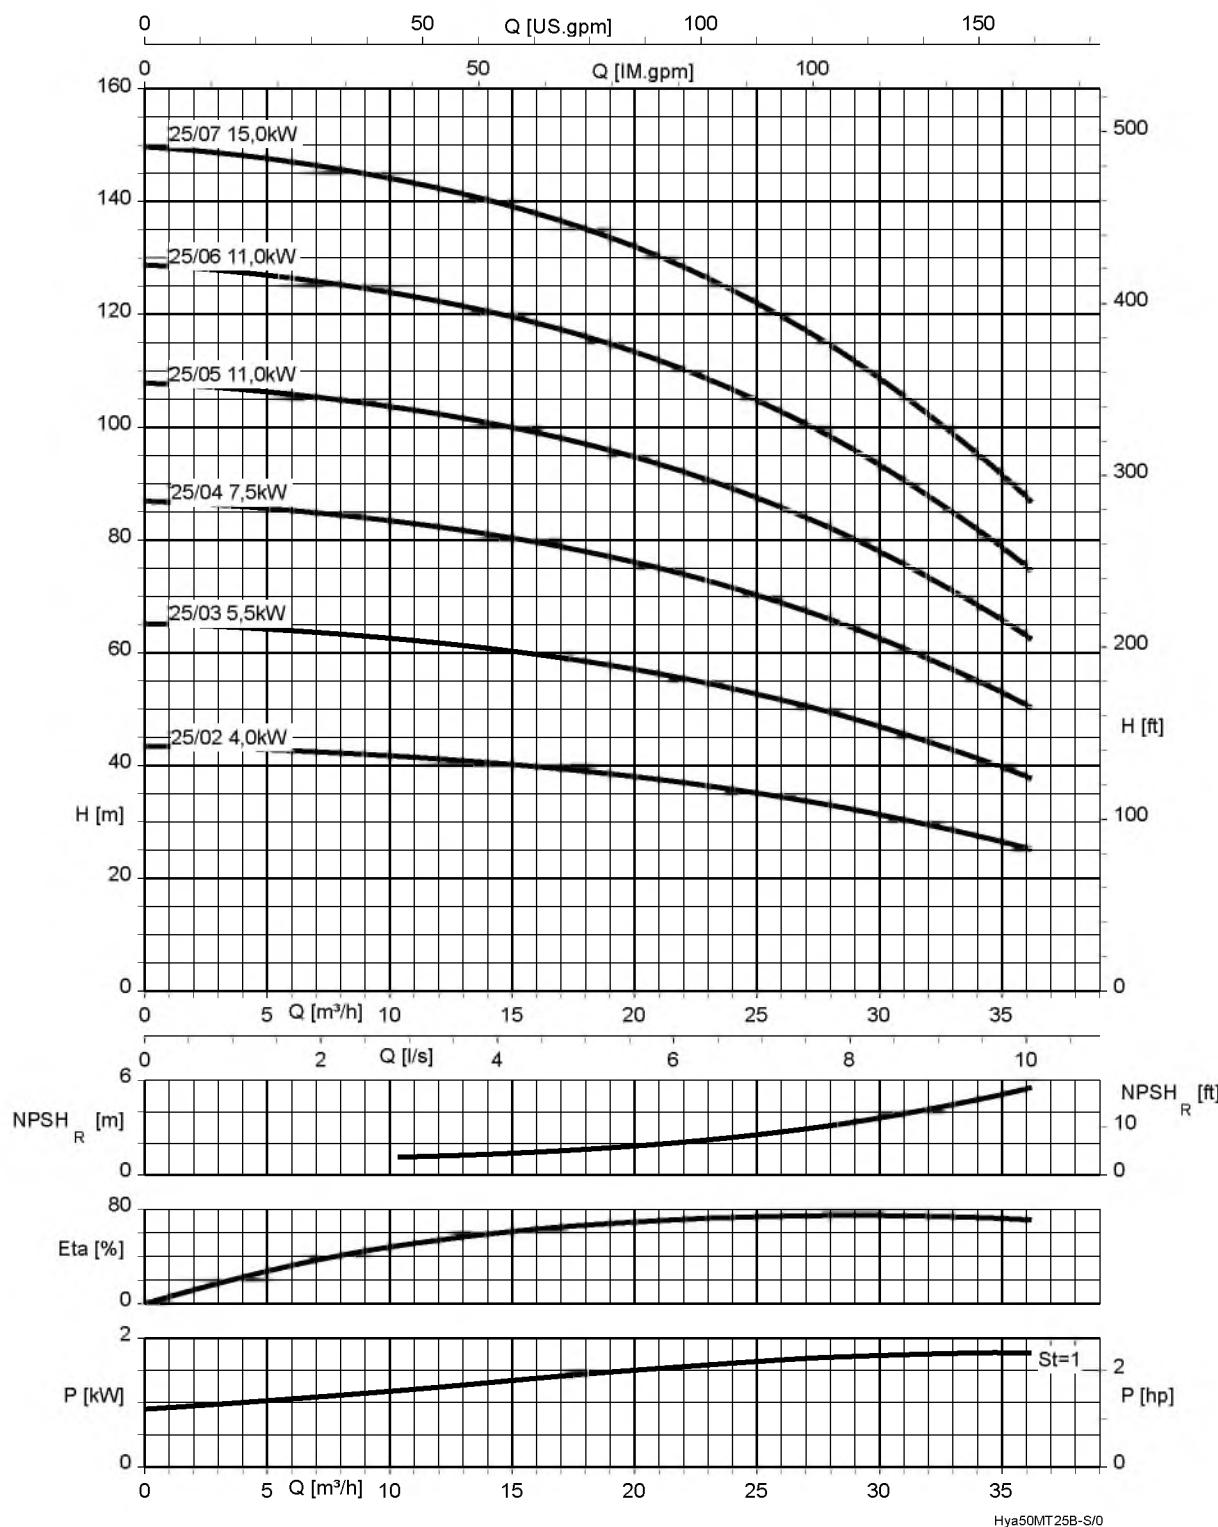

St = 1 | P per stage

Hya-Solo DSV with Movitec 15B, n = 3000 rpm

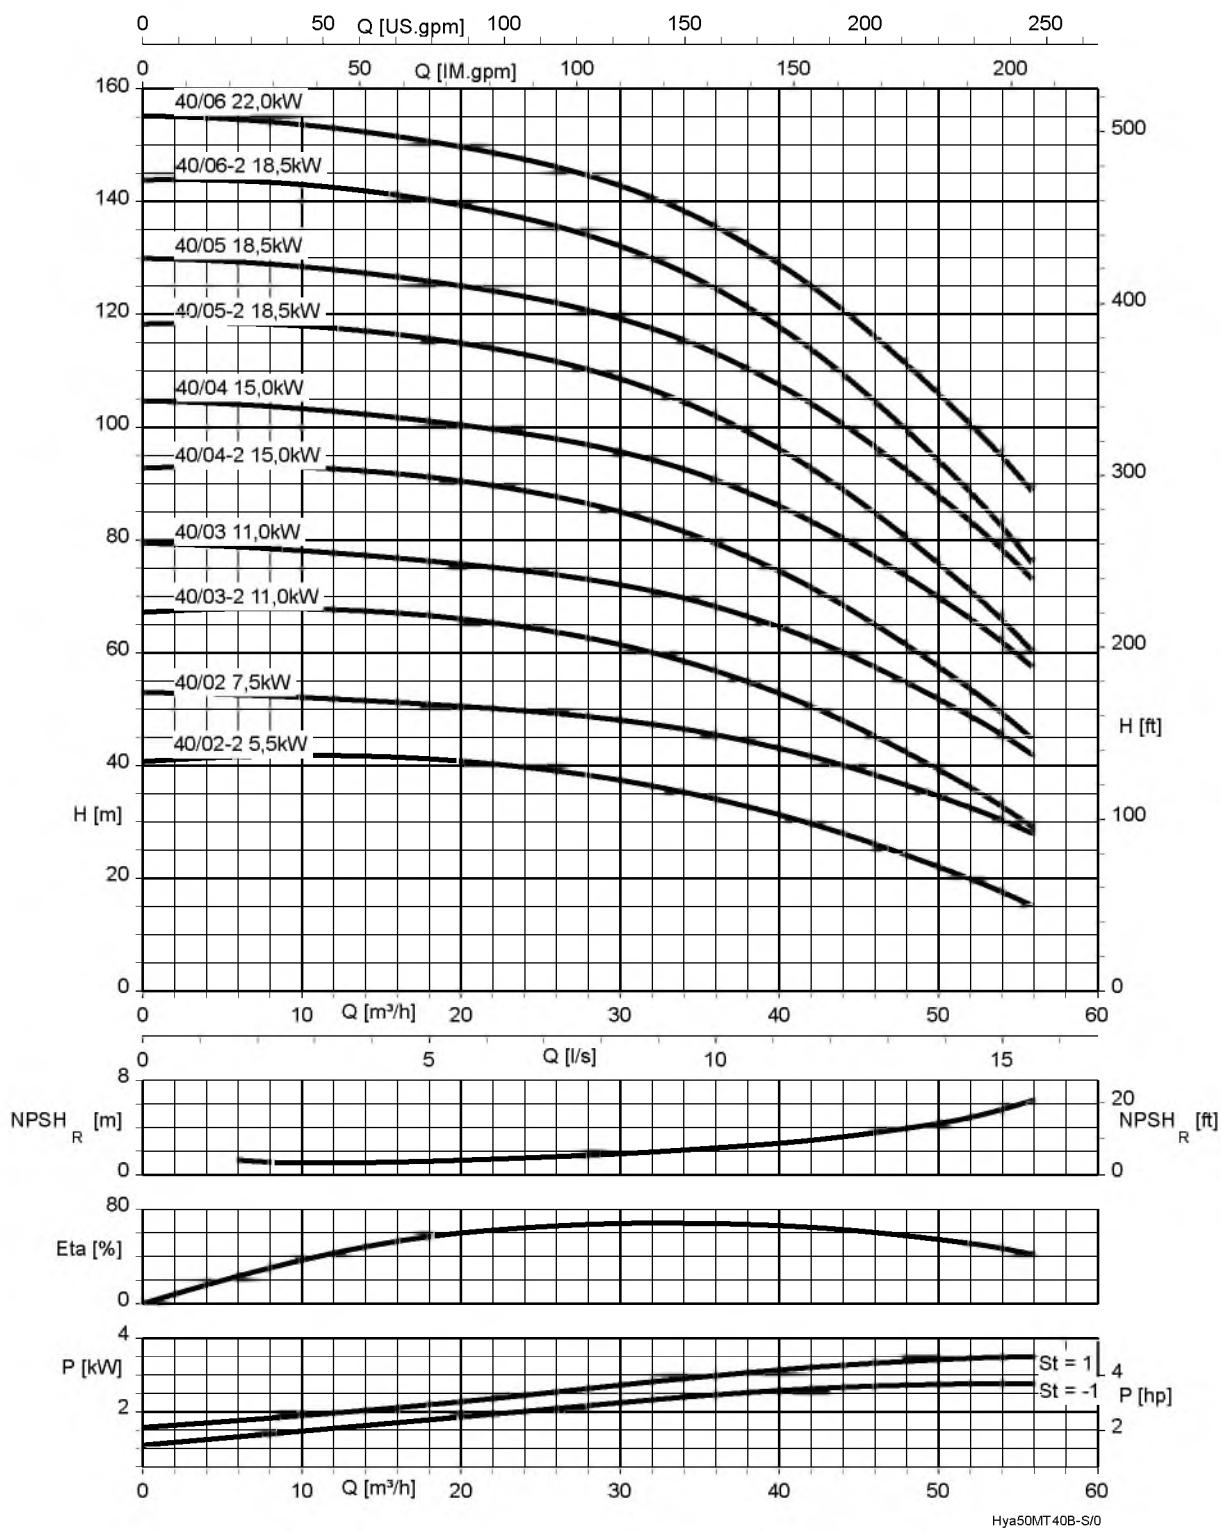

St = 1 | P per stage

Hya-Solo DSV with Movitec 25B, n = 3000 rpm

St = 1 | P per stage

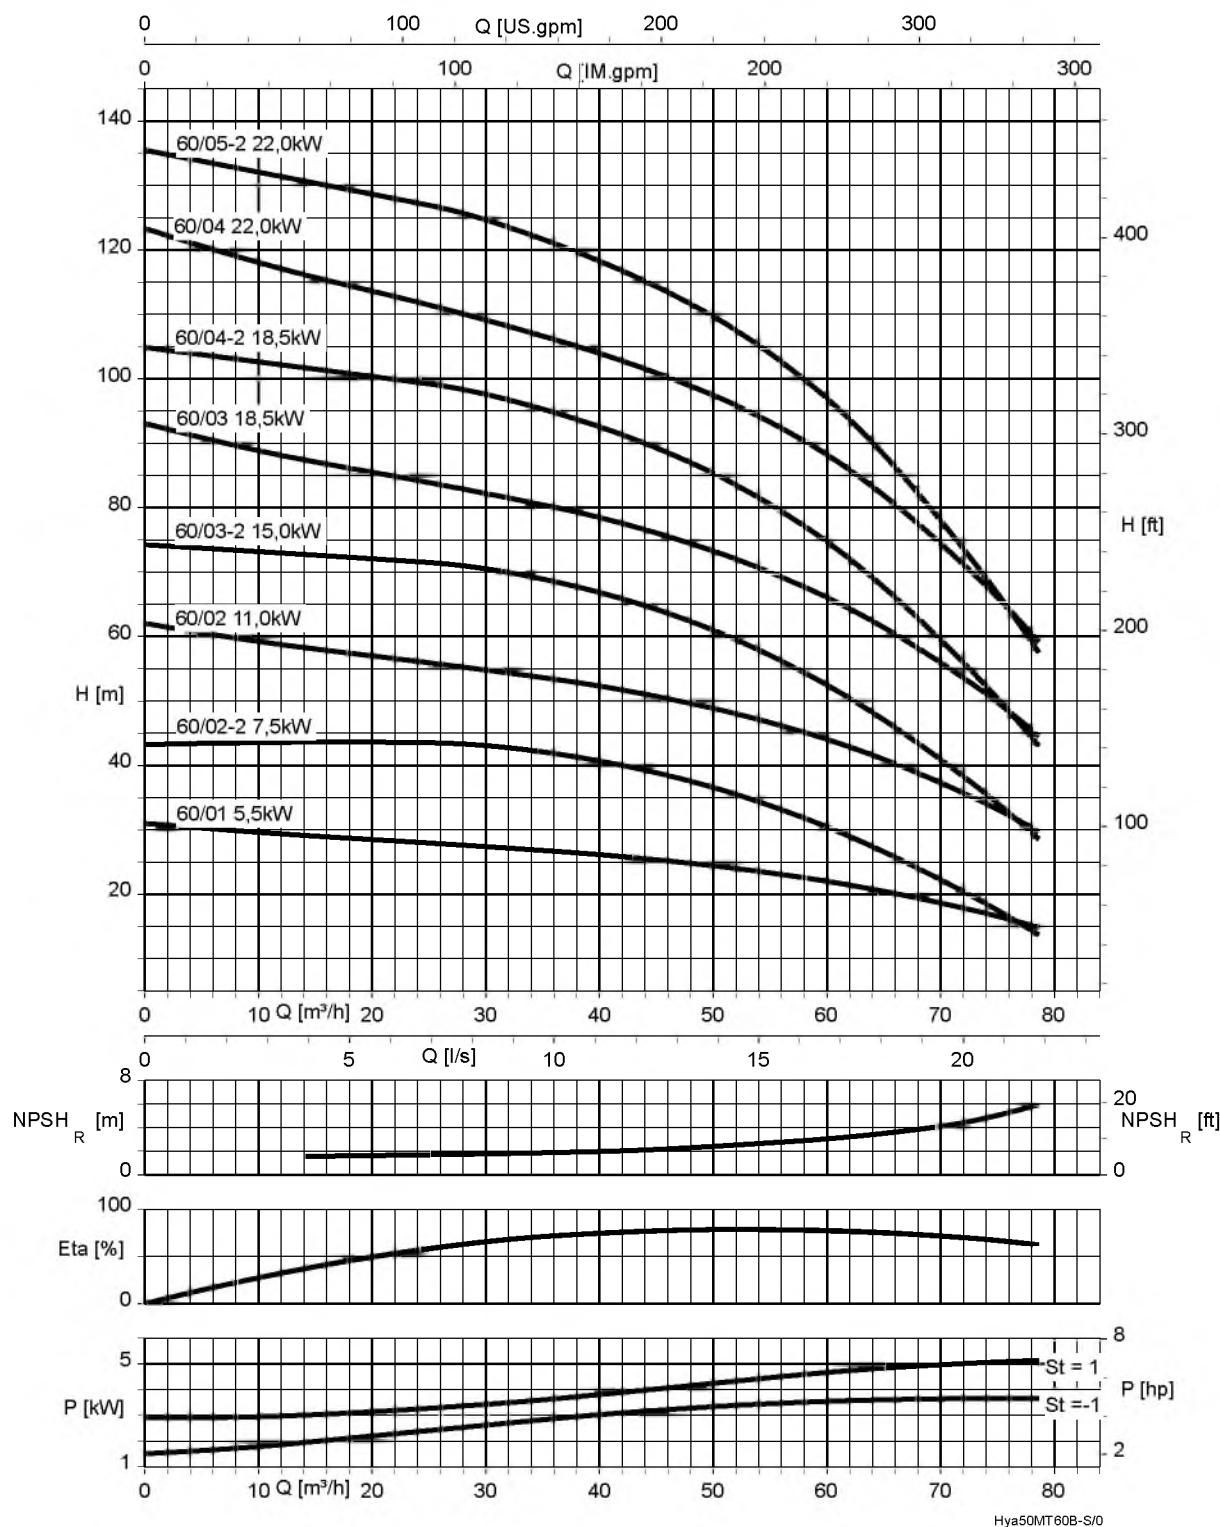

Hya-Solo DSV with Movitec 40B, n = 3000 rpm

St = 1 | P per stage

St = -1 | P per stage with a smaller impeller

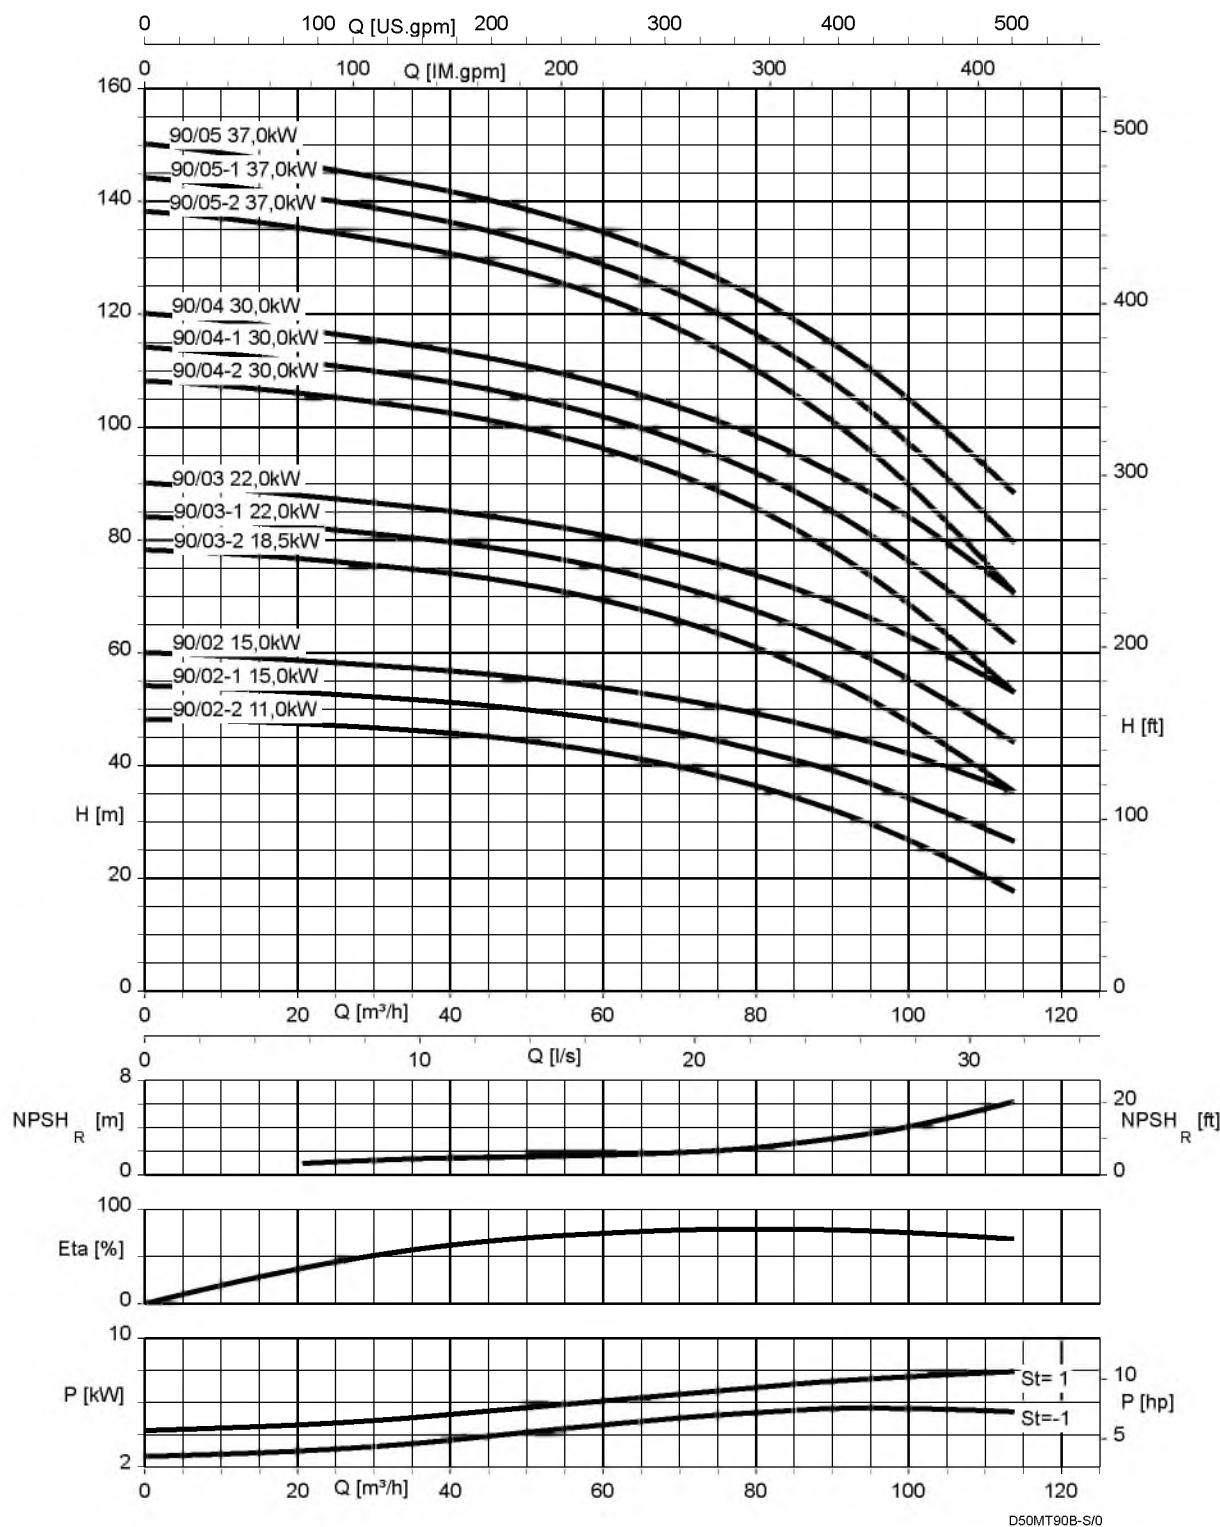

Hya-Solo DSV with Movitec 60B, n = 3000 rpm

|St = 1 | P per stage

|St = -1 | P per stage with a smaller impeller

Hya-Solo DSV with Movitec 90B, n = 3000 rpm

Systems with 1, 1-1, 2, 2-2, 3 and 3-2 stages

The actual curve will deviate from the documented curve due to the reduced speed. An accurate selection can only be made with KSB's selection program KSB EasySelect.

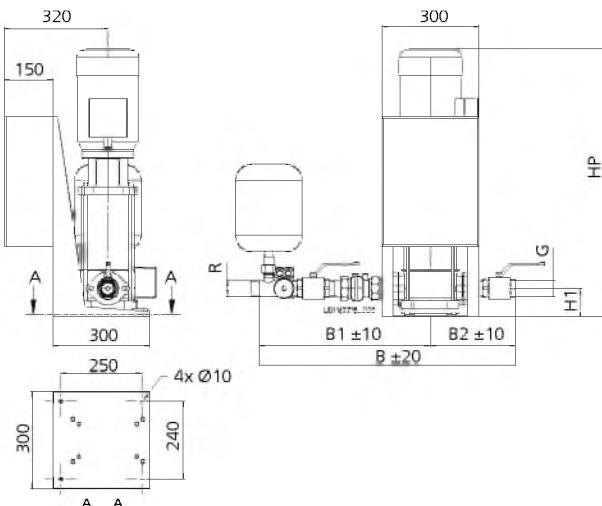

St = 1 | P per stage

St = -1 | P per stage with a smaller impeller

Building Services: Water Supply

Pressure Booster Systems

Surpresschrom SIC.2 SVP

Main applications

- Pressure boosting

Fluids handled

Pump for handling clean liquids not chemically and mechanically aggressive to the pump materials.

- Drinking water
- Service water
- Cooling water

Operating data

Operating properties

Characteristic	Value	
Flow rate	Q [m³/h]	≤ 660 with a max. of 6 pumps ¹⁾
	Q [l/s]	≤ 183 with a max. of 6 pumps ¹⁾
Head	H [m]	≤ 160
Fluid temperature	T [°C]	≤ 70 ≤ 25 to DIN 1988 (DVGW)
Operating pressure	p _d [bar]	≤ 16
Inlet pressure	p _{vor} [bar]	≤ 10

Designation

4	Pump size
2	Number of pumps
8	Number of stages
C	Types of connection V, C or A

Design details

Design

- Fully automatic pressure booster package system
- Baseplate-mounted
- Two to six vertical high-pressure centrifugal pumps with continuously variable speed adjustment
- Hydraulic components made of stainless steel / brass
- One check valve (depending on the installation type) and shut-off valves for each pump
- Anti-vibration mounts for each pump for systems with Movitec 2B, 4B, 6B, 10B, 15B
- Systems with level-adjustable feet with rubber pads (supplied but not fitted) for systems with Movitec 25B, 40B, 60B and 90B
- Membrane-type accumulator (direct-flow) to DIN 4807-5 on the discharge side, approved for drinking water
- Pressure gauge for pressure indication
- Pressure transmitter on the discharge side

Compliance with standards

- EN 809
- EN 806-2
- EN 60204-1
- ISO 12100-1 and 2
- NFC 15-100

ACS-approved (Attestation de Conformité Sanitaire)

Installation type

- Stationary installation

Drive

- High-efficiency magnet-less KSB-SuPremE-IE4 motor (as per IEC/CD 60034-30 Ed. 2)

Automation

- Control cabinet IP54
- Pump control and monitoring unit
- Graphical display with operating panel
- LEDs indicating operational availability and fault of the system
- Service interface for connection to a PC
- Frequency inverter
- Transformer for control voltage
- Motor protection switch per pump
- Lockable master switch (repair switch)
- Pressure transmitter on the discharge side
- Circuit diagram and list of electric components
- Terminal strip/terminals with identification for all connections

¹⁾ With stand-by pump as peak load pump

- Connection for analog or digital dry running protection equipment
- External ON/OFF connection
- Field bus connection (optional)

Volt-free signals

- Volt-free signals for dry running protection, warning and alert as standard
- Volt-free signals for operation and fault per pump, voltage monitoring and phase monitoring (optional)

Configuration and function

Illustration of pressure booster system

1	Control unit	2	Control cabinet
3	Motor with variable speed system	4	Pump
5	Manifold	6	Baseplate

Design

The fully automatic pressure booster system is equipped with two to six vertical high-pressure pumps (4) (all of which are speed-controlled) for pumping the fluid handled to the consumer installations in the set pressure range.

Function

Automatic mode

Two to six pumps (4) are controlled and monitored by a microprocessor control unit (1). Each pump is operated on a frequency inverter and controlled by the control unit so as to ensure a constant discharge pressure of the pressure booster system. As the demand increases or decreases, peak load pumps are started and stopped automatically.

As soon as the demand increases again after one pump has been stopped, another pump which has not been in operation before is started up. When the last pump has been stopped and the demand increases again, the next pump in line is started up in variable speed operation. The stand-by pump is also included in the alternating cycle. The standard setting is for the pressure booster system to start automatically as a function of pressure; the actual pressure is measured by an analog pressure measuring device (pressure transmitter). The function of this pressure transmitter is monitored (live-zero). As long as the pressure booster system is in operation, the pumps are started and stopped as a function of demand (standard setting). In this way it is ensured that the individual pumps operate only in line with actual demand. The use of variable speed pumps reduces wear as well as the pumps' frequency of starts in parallel operation. If a duty pump fails,

the next pump is started up immediately and a fault is output, which can be reported via volt-free contacts (e.g. to the control station). If the demand drops towards 0, the pressure booster system slowly runs down to the stop point. The operating status is displayed via LEDs.

Function

Energy-saving mode

In conjunction with a very large discharge-side accumulator, the energy-saving mode prevents the pressure booster system from running at the least efficient operating point, supplying very small amounts of water.

If very small amounts of water are consumed the pressure booster system only fills the downstream accumulator and stops.

Any small water volumes required can then be supplied from the accumulator.

Function

Manual mode

Depending on the equipment the pressure booster system is supplied with, the pumps can be operated in manual mode in either one or two different ways.

Standard: By making the appropriate settings at the display, one of the pumps can be operated directly on mains power for 10 seconds, independently of the control unit. The pump will then automatically return to OFF mode.

Supplementary equipment: Manual-0-automatic selector switches can be supplied as supplementary equipment. They can be used to operate each pump directly on mains power, independently of the control unit.

In manual mode, a minimum flow (see table below) is essential to prevent the fluid handled and/or the pump from overheating when no water is consumed at the consumer installations.

Minimum flow for pump in manual mode

Minimum flow per pump in manual mode

Pump	Minimum flow per pump in manual mode [l/h]
Movitec 2B	200
Movitec 4B	400
Movitec 6B	600
Movitec 10B	1100
Movitec 15B	1600
Movitec 25B	2800
Movitec 40B	4600
Movitec 60B	6100
Movitec 90B	8500

Example

An open $\frac{1}{2}$ -inch tap equals a water consumption of approx. 800 to 1,200 l/h.

Materials

Overview of available materials

Component	Material
Pump casing	Stainless steel
Shroud	Stainless steel
Hydraulic system	Stainless steel
Mechanical seal	Complies with EN 12756
Primary ring	Silicon carbide
Mating ring	Hard carbon
Elastomer	EPDM
Baseplate	Steel, with powder or paint coating

Hydraulic design

Component	Material
Manifold	Stainless steel
Valves	Copper-base alloy / brass or nodular cast iron / EPDM DVGW-approved Approved for drinking water
Accumulator	Connection made of stainless steel, flow through valve to DIN 4807-5
Membrane	Approved for drinking water

Atmospheric humidity

Temperature [°C]	Atmospheric humidity [%]
40	50
30	65
20	80

Maximum installation altitude: 1000 m above MSL (for higher altitudes, derate the motor power by 1 % per 100 m).

Accumulator in combination with a variable speed system

Unless otherwise specified in special regulations, installing an accumulator is recommended, especially for maintaining the pressure in the piping network during standstill of the pressure booster system. The accumulator volume is not stipulated in any regulations. The selection is based on the system-specific conditions (as a basic solution KSB offers an 8-litre accumulator). The standstill times of the pressure booster system depend on the volume the accumulator can feed back into the piping system. The accumulator size should be a compromise and take into account possible leakages in the piping system.

Product benefits

- Energy-efficiency optimised by high-efficiency magnet-less KSB-SuPremE-IE4 motor (to IEC/CD 60034-30 Ed. 2) and energy-saving function
- Ready-to-connect, supplied pre-set and tested for functionality
- User-friendly, straightforward menu navigation
- Reliable operation by corrosion-resistant internal parts
- Suitable for drinking water installations, manufactured under stringent hygienic conditions
- Hydraulic components made of stainless steel / brass

Selection information

A pressure booster system in an overall system behaves similar to a single pump. Its behaviour depends on several factors, some of which are system-specific. All conditions that can influence the operation of the pressure booster system should be considered during selection. Rather than focussing entirely on the demand to be satisfied on the discharge side, make sure that the suction-side conditions of the pressure booster system are also met.

The following parameters define the operating data of the system:

- Flow rate Q: maximum demand
- Head H in metres of water: system head at the least favourable consumer installation
- Conditions for supplying the pressure booster system with water and power. See the section on "Operating limit"
- Always inform KSB if the distribution network comprises control equipment, such as pressure reducers or control valves, installed downstream of the pressure booster system.

Operating conditions

- Consumption profile
This reflects the consumption and its minimum/maximum peaks. This parameter is required to determine the optimum number of pumps and the most suitable control mode. Typical profiles are known especially from drinking water supply or pressure boosting tasks for drinking water applications. For industrial applications an exact analysis of the profile is essential.
- Special requirements mentioned in the functional requirements specification (if any)

Application limits

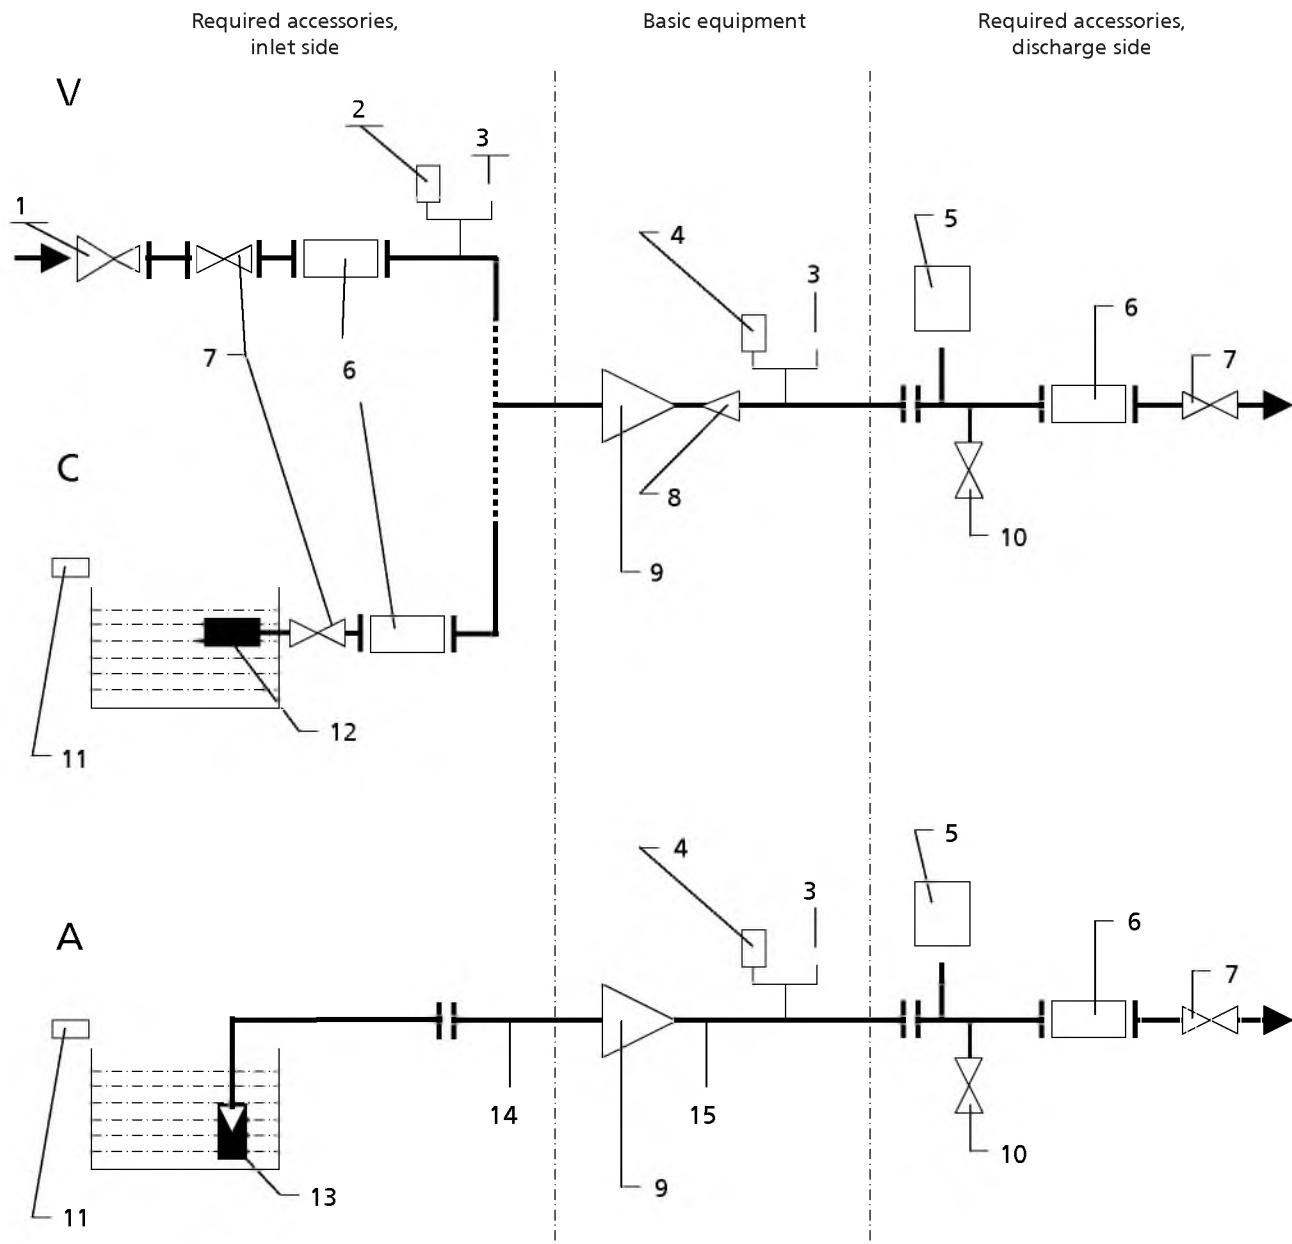

Place of installation:

The maximum ambient temperature depends on the relative atmospheric humidity.

Determining the power input

- The power input is indicated per stage ($St = 1$) and/or per stage with a smaller impeller ($St = -1$).
The pump input power can be calculated accordingly.
Calculation: value indicated in the diagram ($St = 1$) × number of stages + value indicated in the diagram ($St = -1$) × number of stages with a smaller impeller
Example 1, Movitec 90/4: $P = (St = 1) \times 4$
Example 2, Movitec 90/4-1: $P = (St = 1) \times 3 + (St = -1)$
Example 3, Movitec 90/4-2: $P = (St = 1) \times 2 + (St = -1) \times 2$

Selection chart

Surpresschrom SIC.2 SVP, n = 3000 rpm

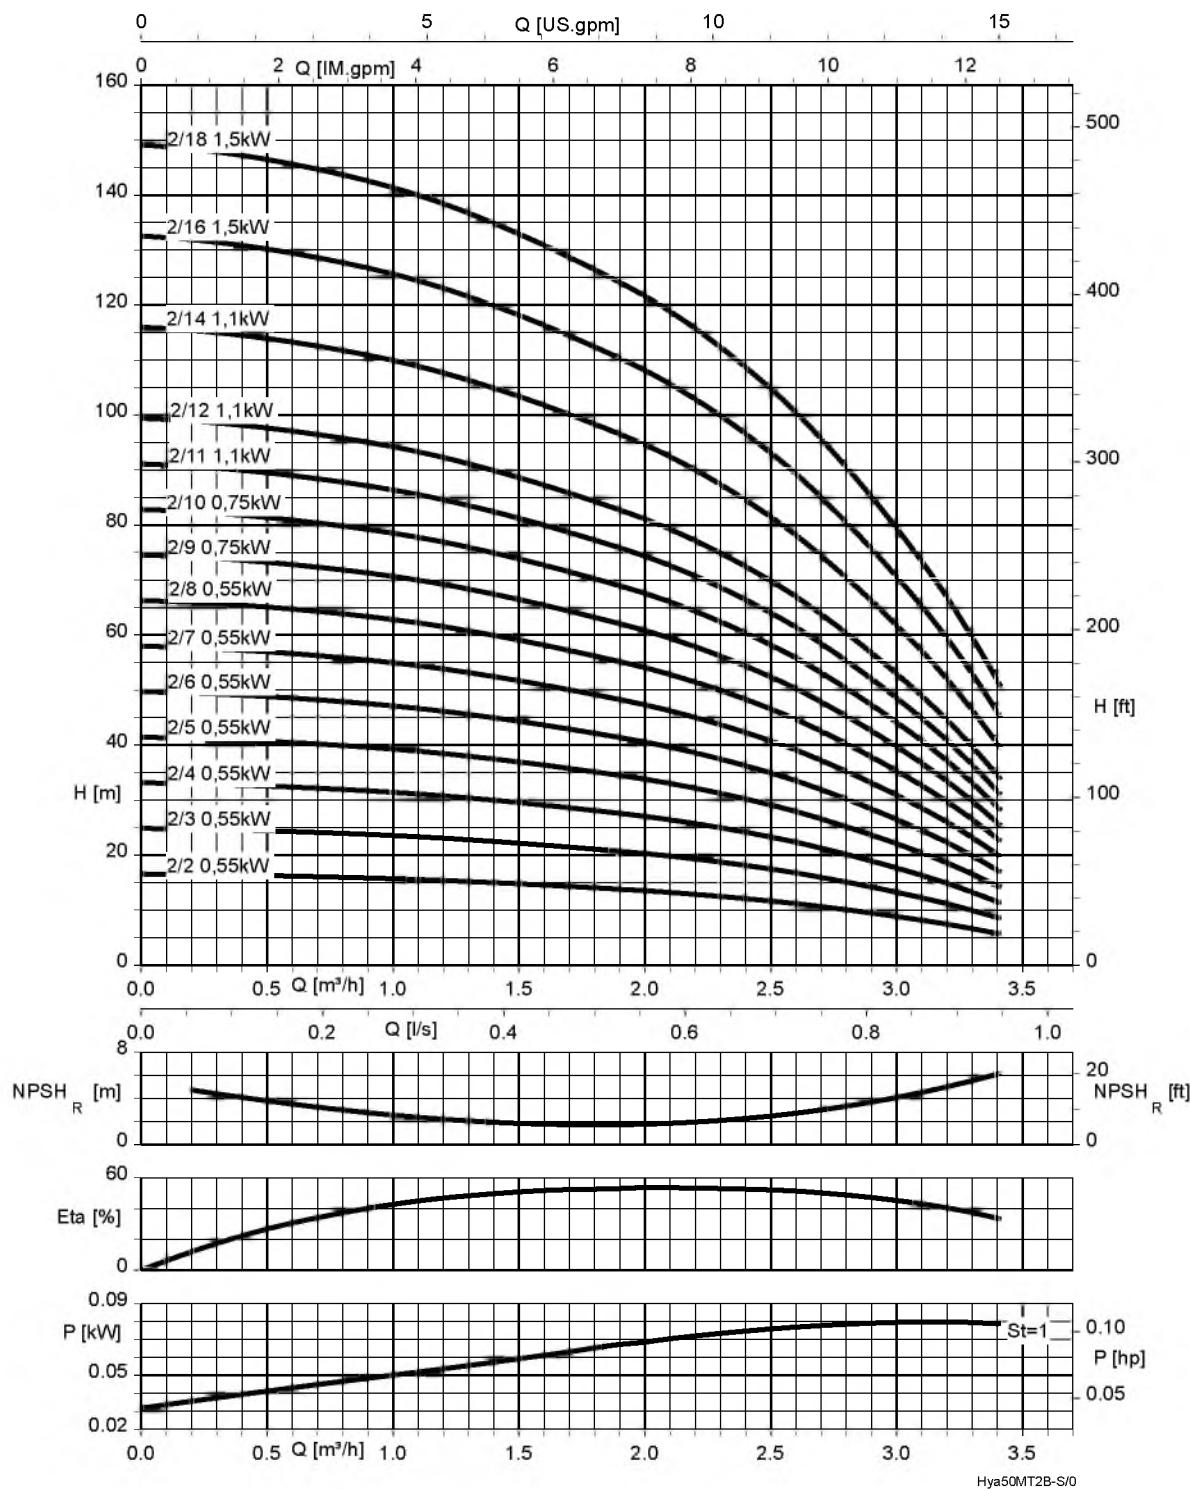

The flow rate in the characteristic curves is based on one duty pump:

The flow rate of a stand-by pump, if any, is not taken into account when calculating the flow rate required.

Flow rates for multiple pump systems

Characteristic curves

Surpresschrom SIC.2 SVP with Movitec 2B, n = 3000 rpm

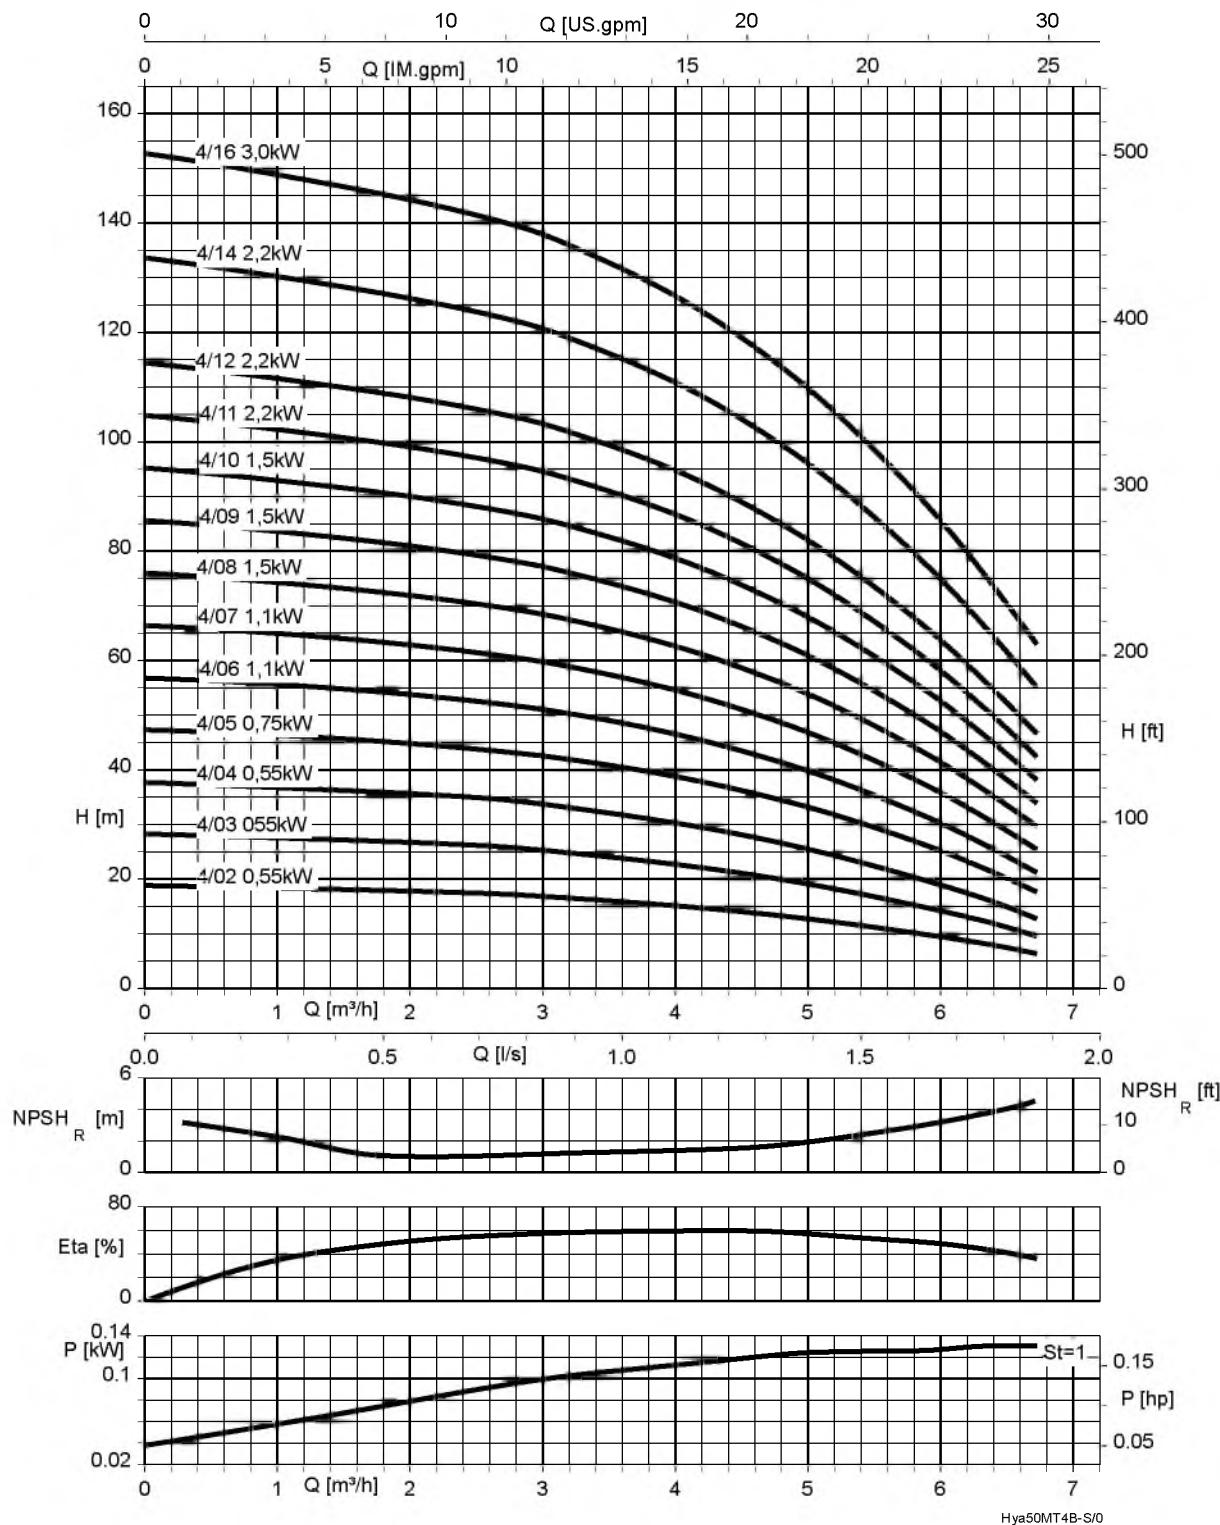

Systems with 4 and 8 stages

The actual curve will deviate from the documented curve due to the reduced speed. An accurate selection can only be made with KSB's selection program KSB EasySelect.

St = 1 | P per stage

Surpresschrom SIC.2 SVP with Movitec 4B, n = 3000 rpm

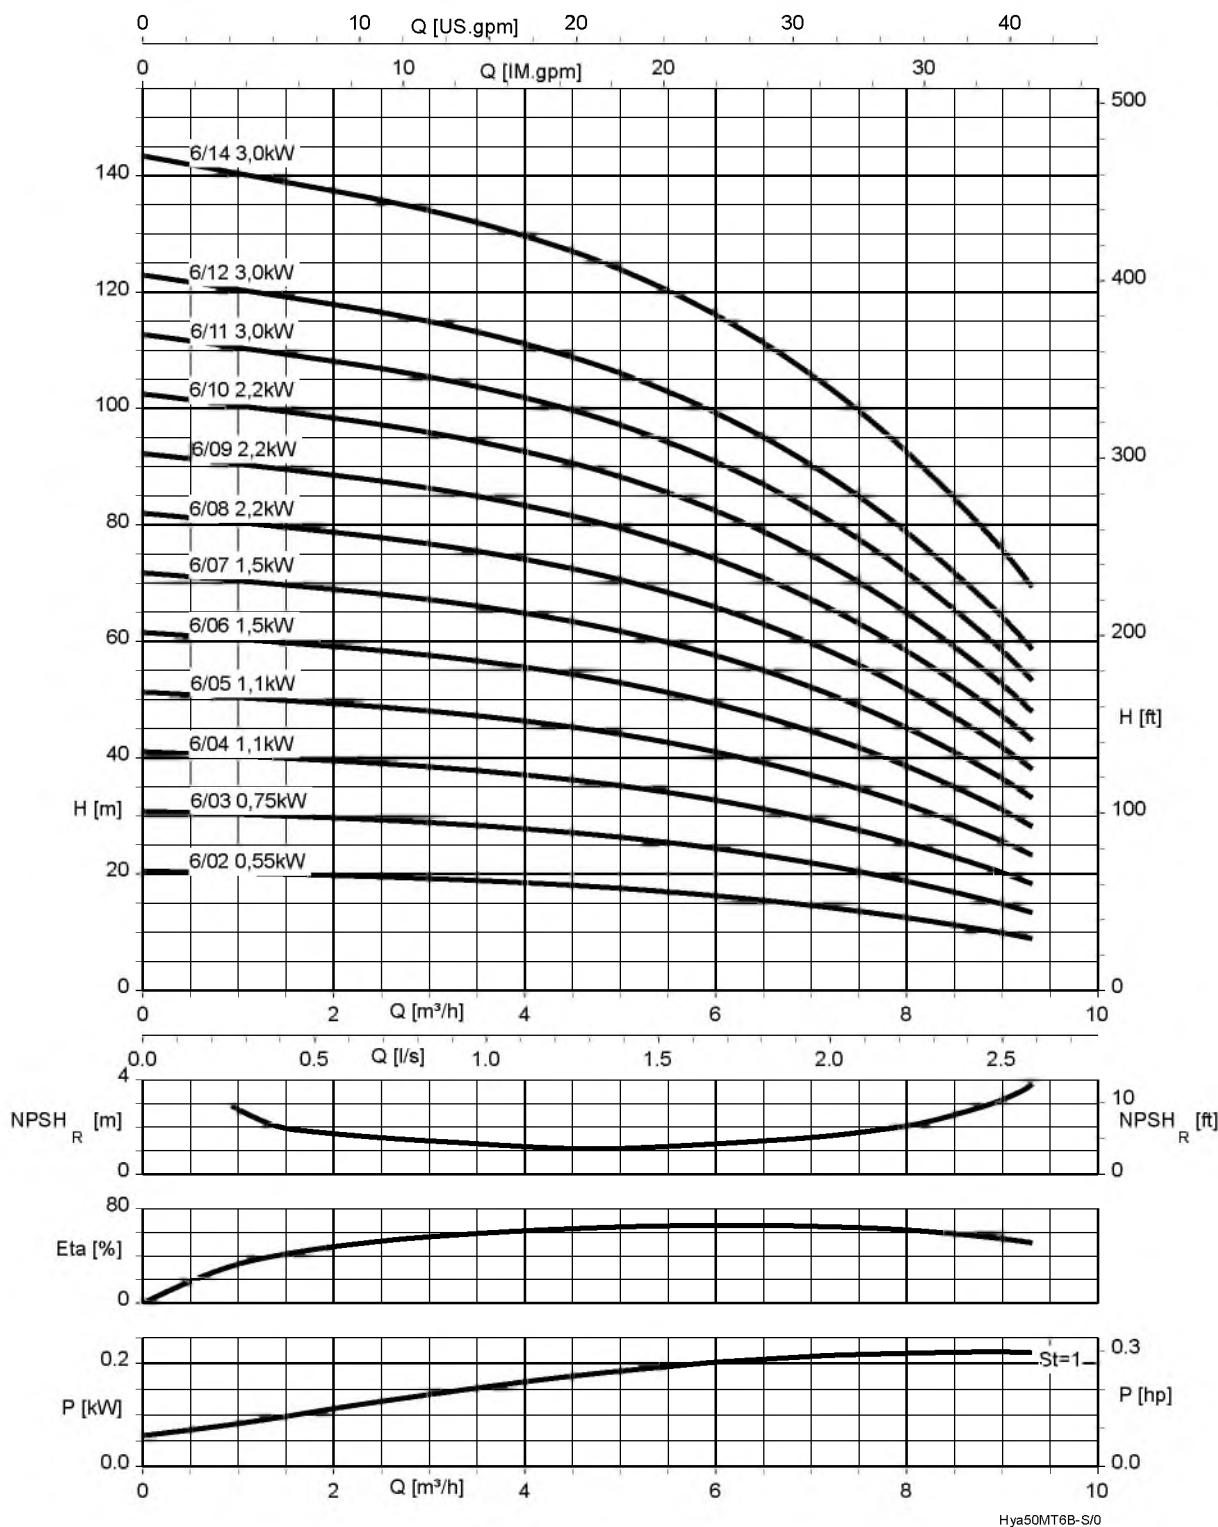

Systems with 4, 5 and 10 stages

The actual curve will deviate from the documented curve due to the reduced speed. An accurate selection can only be made with KSB's selection program KSB EasySelect.

St = 1 | P per stage

Surpresschrom SIC.2 SVP with Movitec 6B, n = 3000 rpm

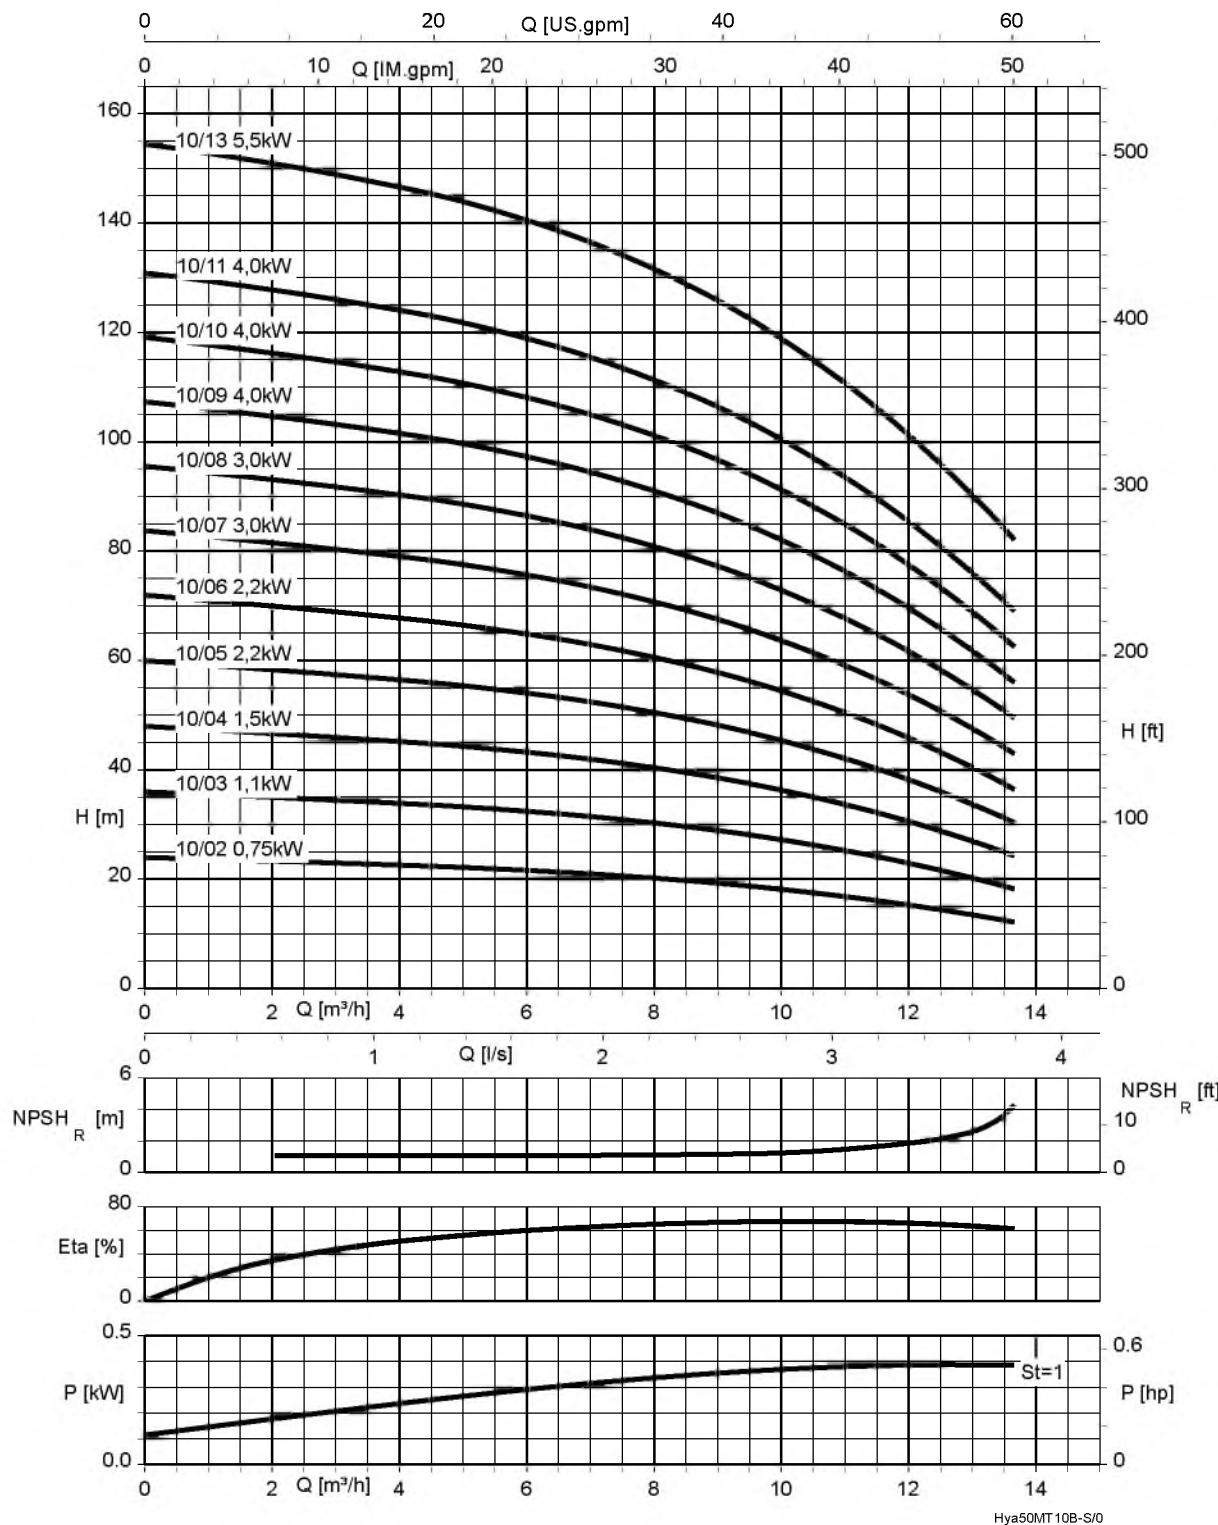

Systems with 2 and 14 stages

The actual curve will deviate from the documented curve due to the reduced speed. An accurate selection can only be made with KSB's selection program KSB EasySelect.

St = 1 | P per stage

Surpresschrom SIC.2 SVP with Movitec 10B, n = 3000 rpm

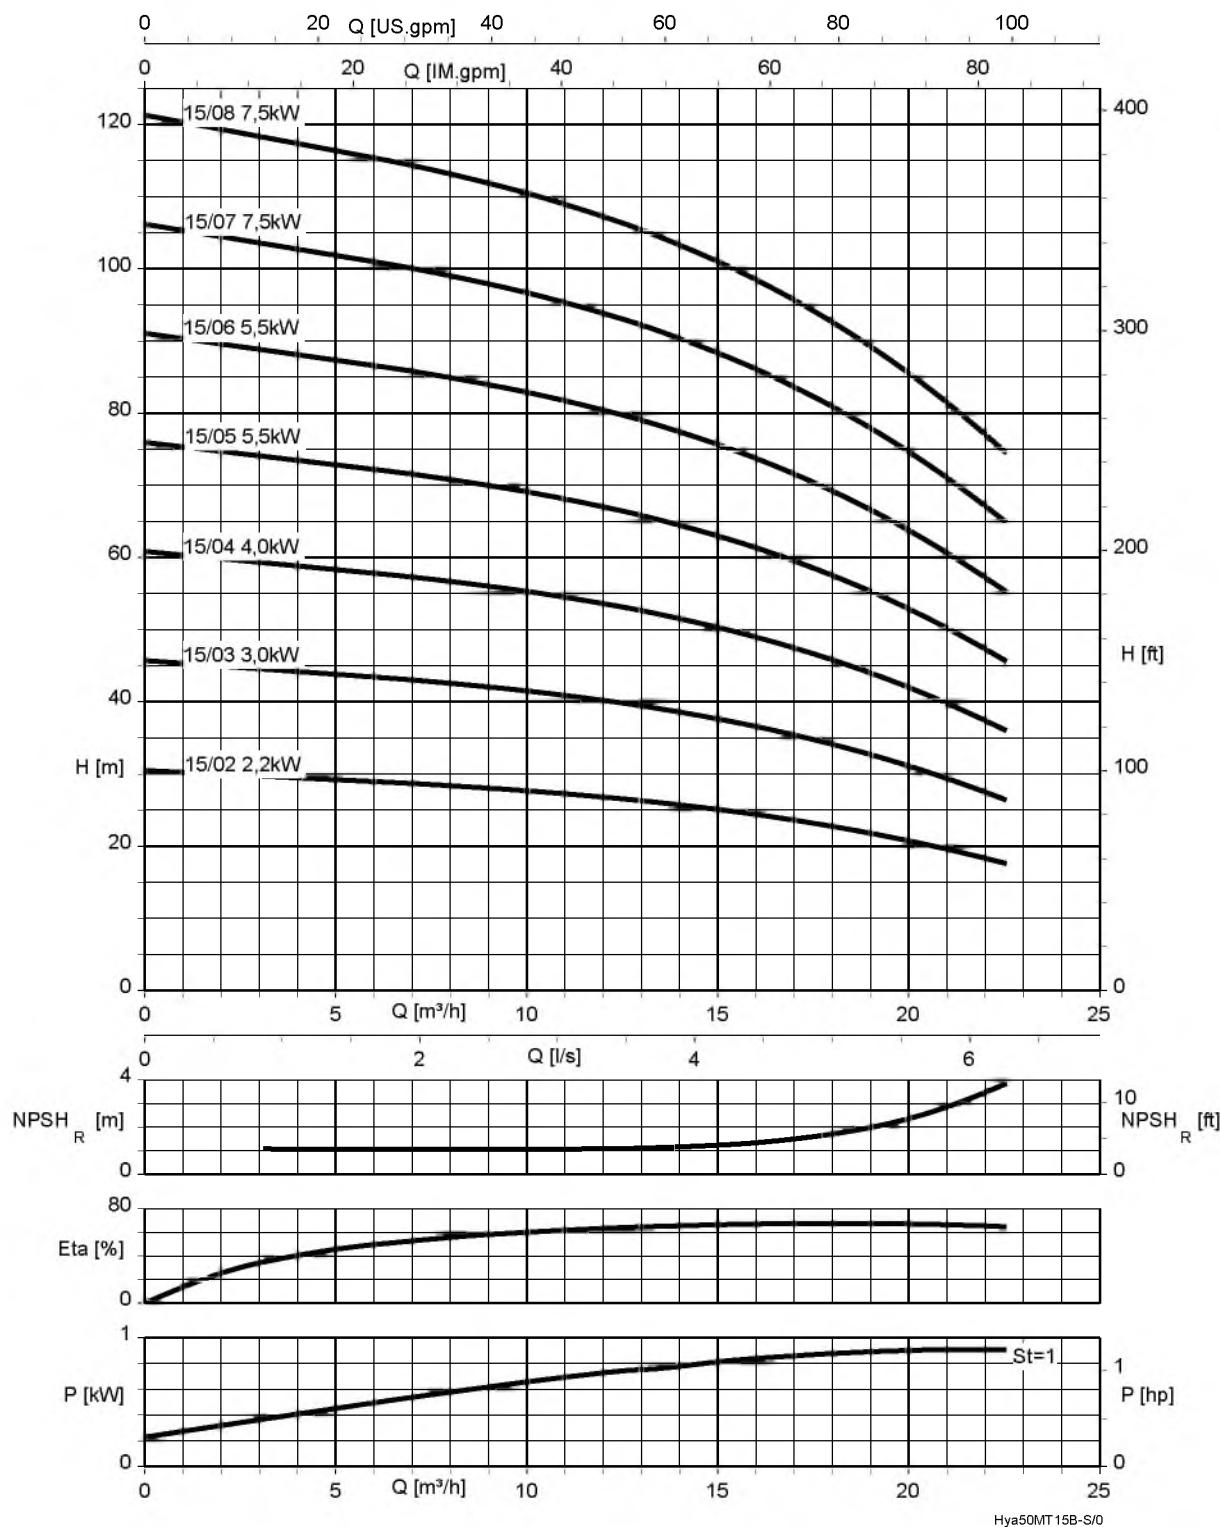

Systems with 2, 3, 4, 8 and 11 stages

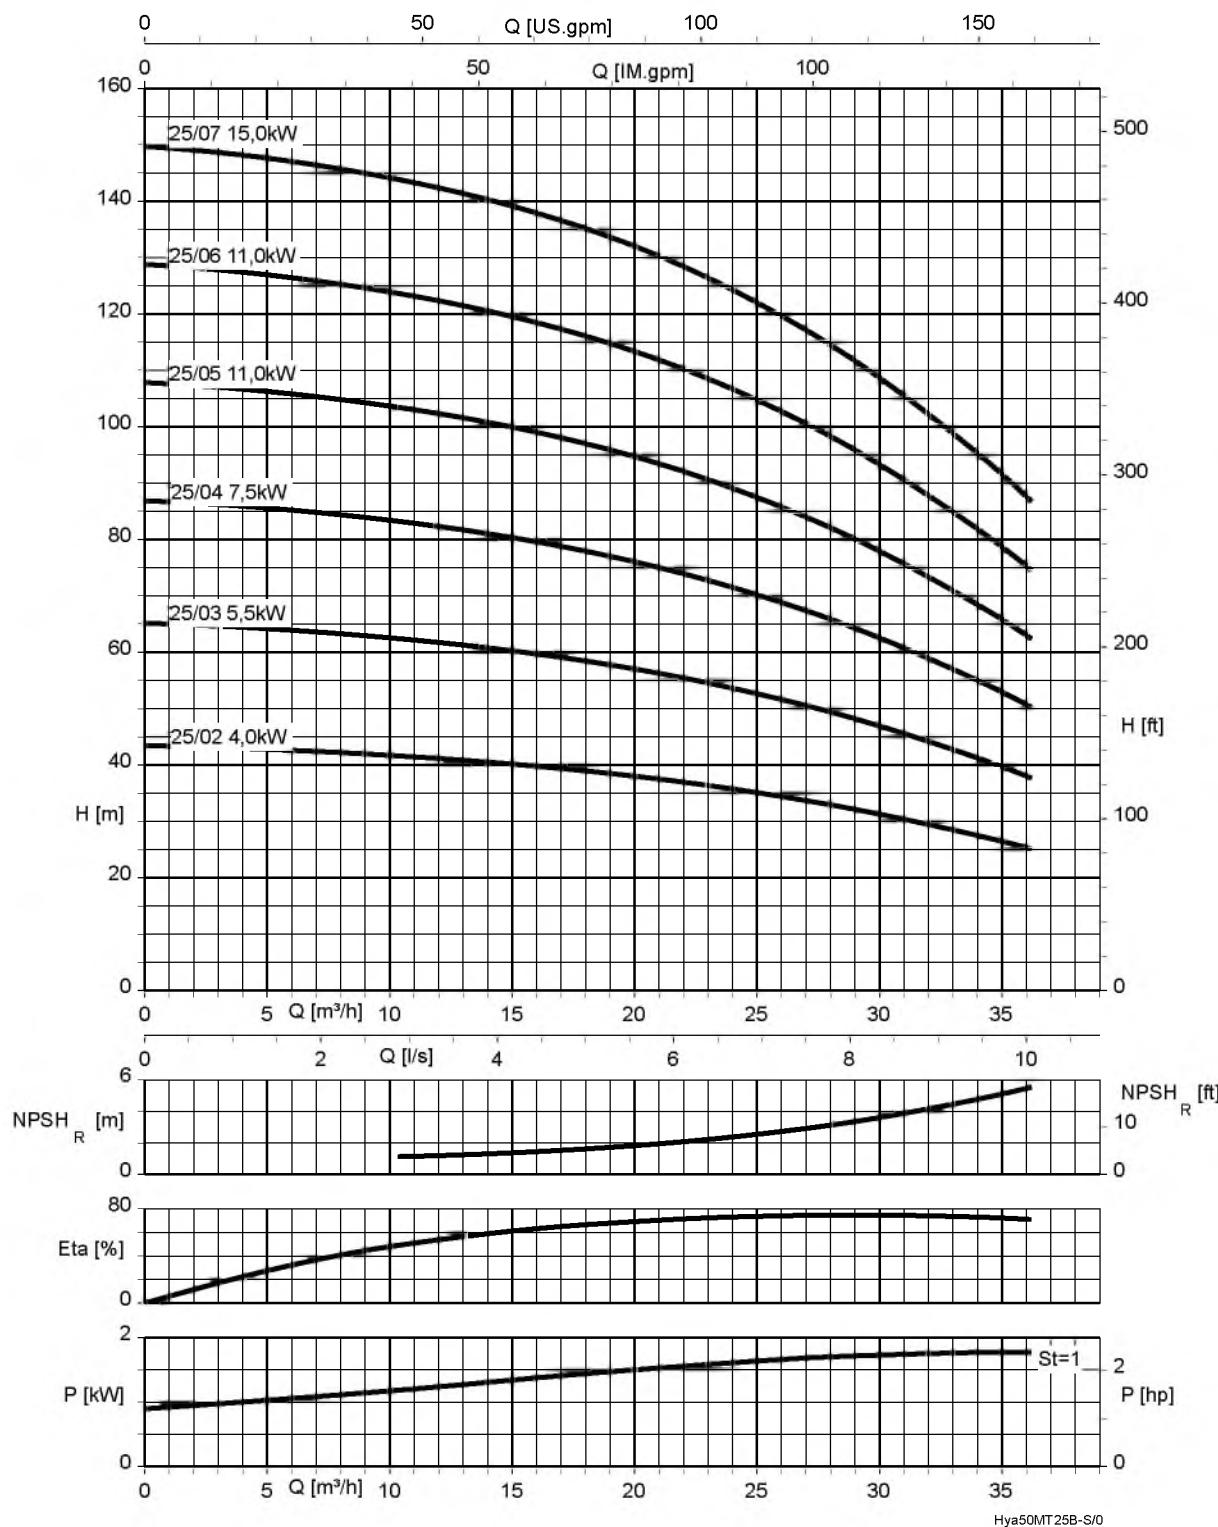

The actual curve will deviate from the documented curve due to the reduced speed. An accurate selection can only be made with KSB's selection program KSB EasySelect.

St = 1 | P per stage

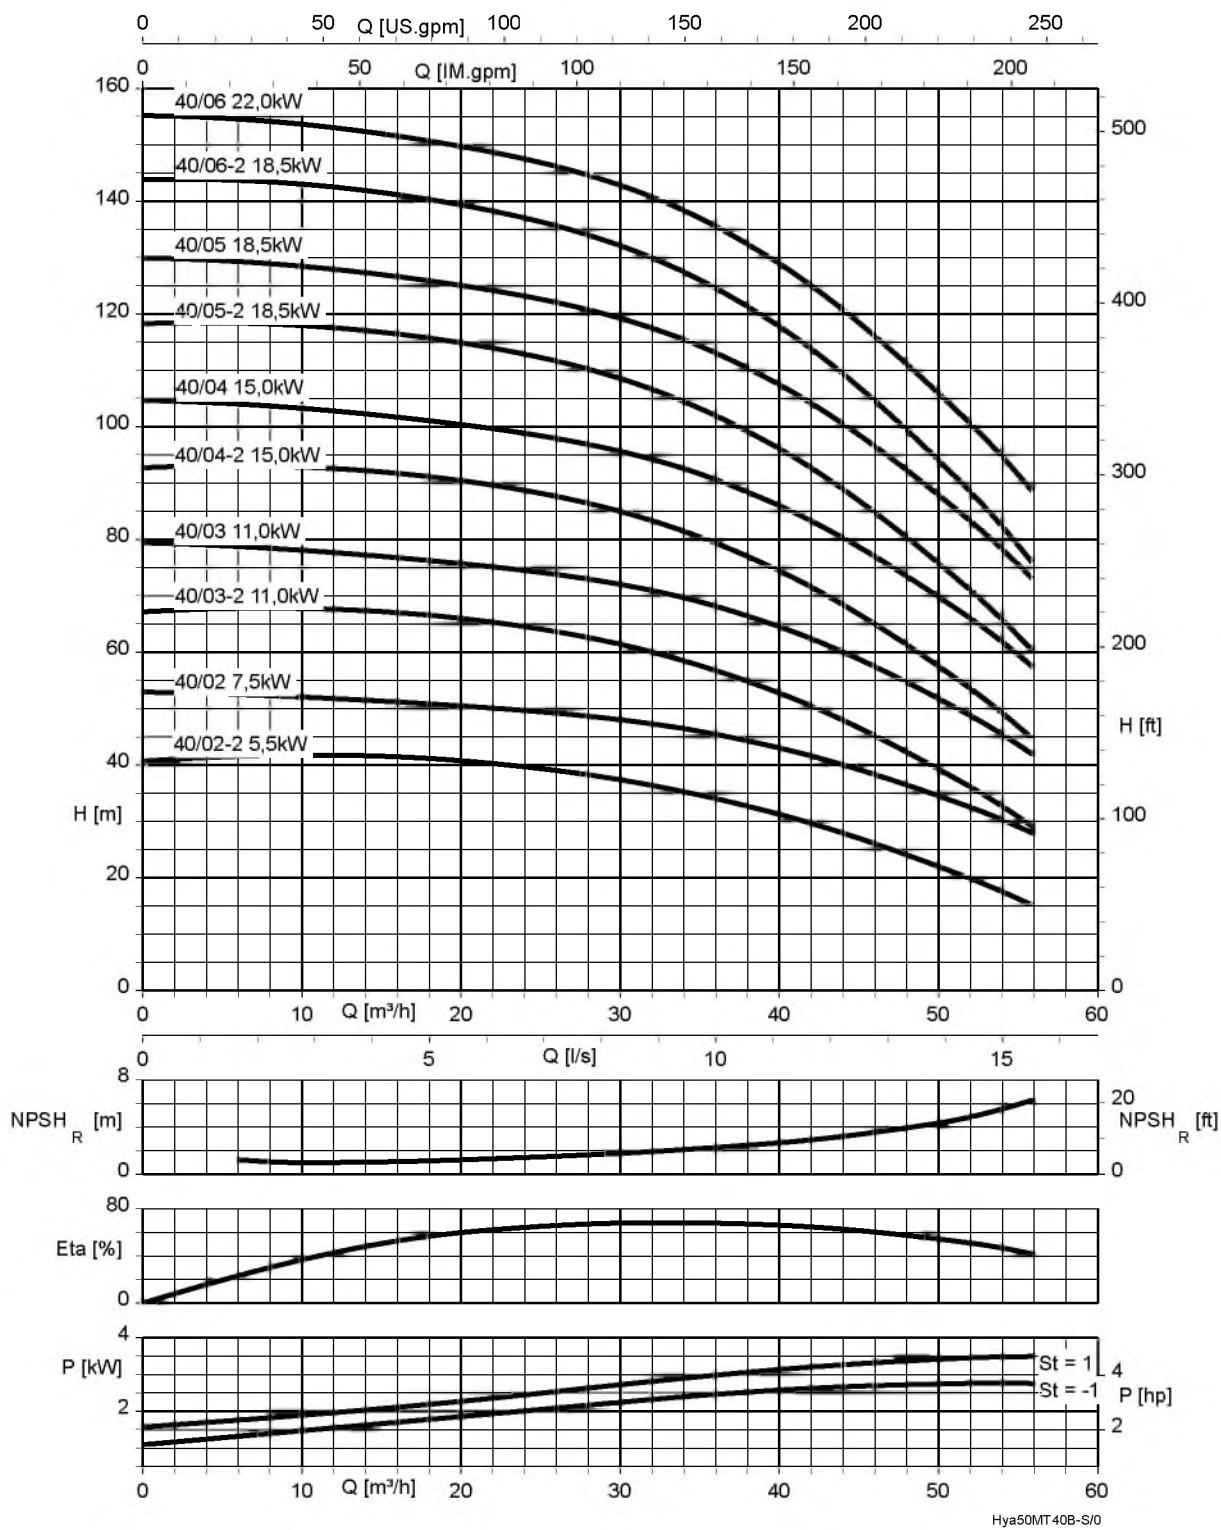

Surpresschrom SIC.2 SVP with Movitec 15B, n = 3000 rpm

Surpresschrom SIC.2 SVP with Movitec 25B, n = 3000 rpm

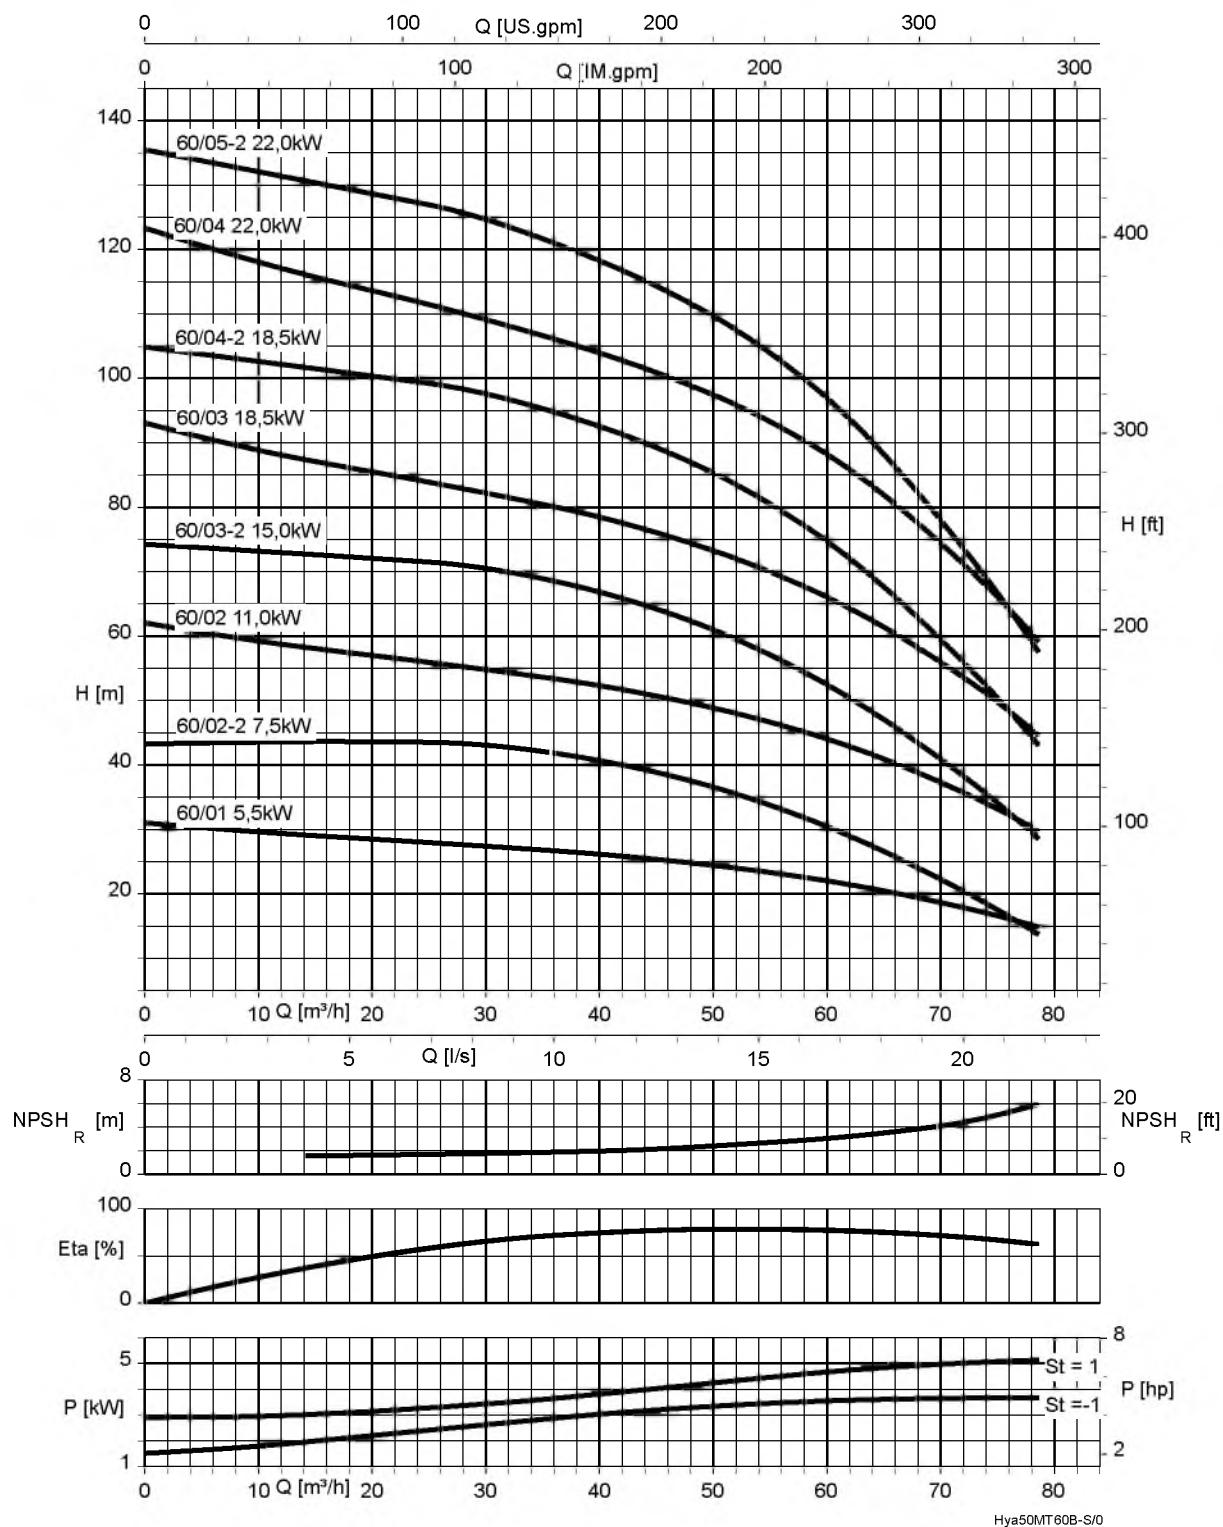

Surpresschrom SIC.2 SVP with Movitec 40B, n = 3000 rpm

$St = 1$ | P per stage

$St = -1$ | P per stage with a smaller impeller

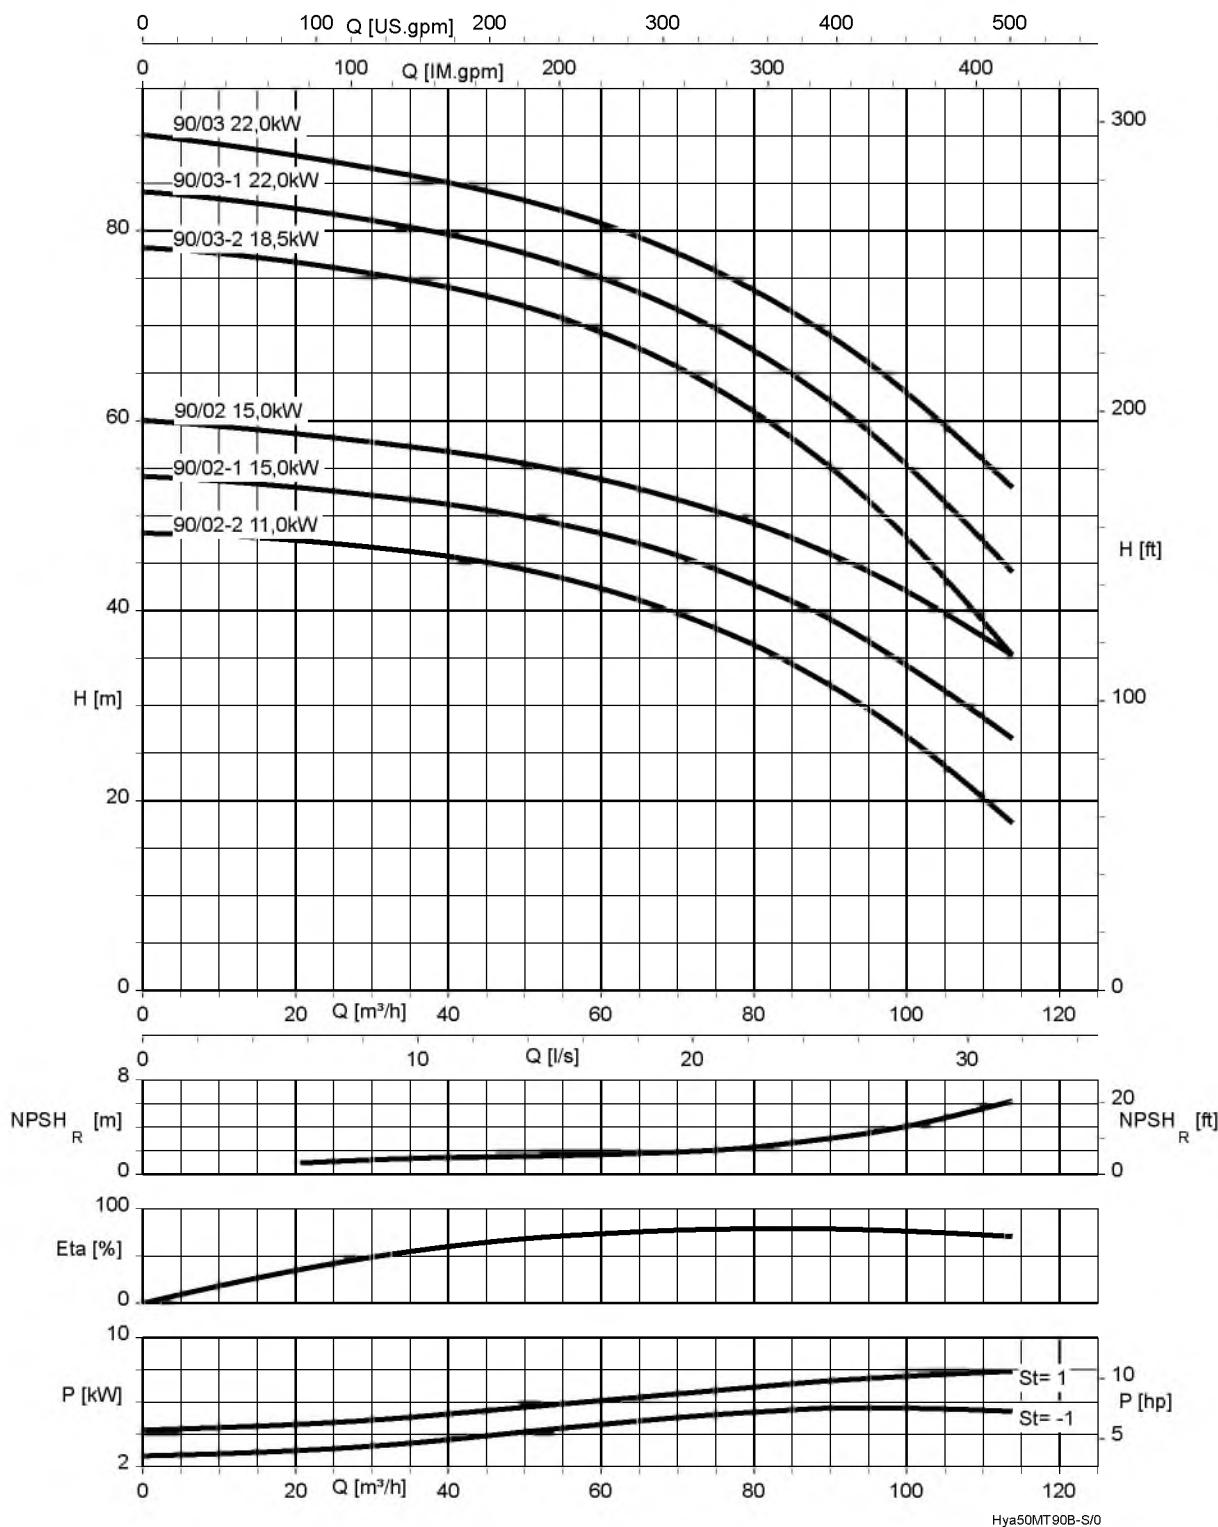

Surpresschrom SIC.2 SVP with Movitec 60B, n = 3000 rpm

|St = 1 | P per stage

|St = -1 | P per stage with a smaller impeller

Surpresschrom SIC.2 SVP with Movitec 90B, n = 3000 rpm

Systems with 2, 3-2 and 3 stages

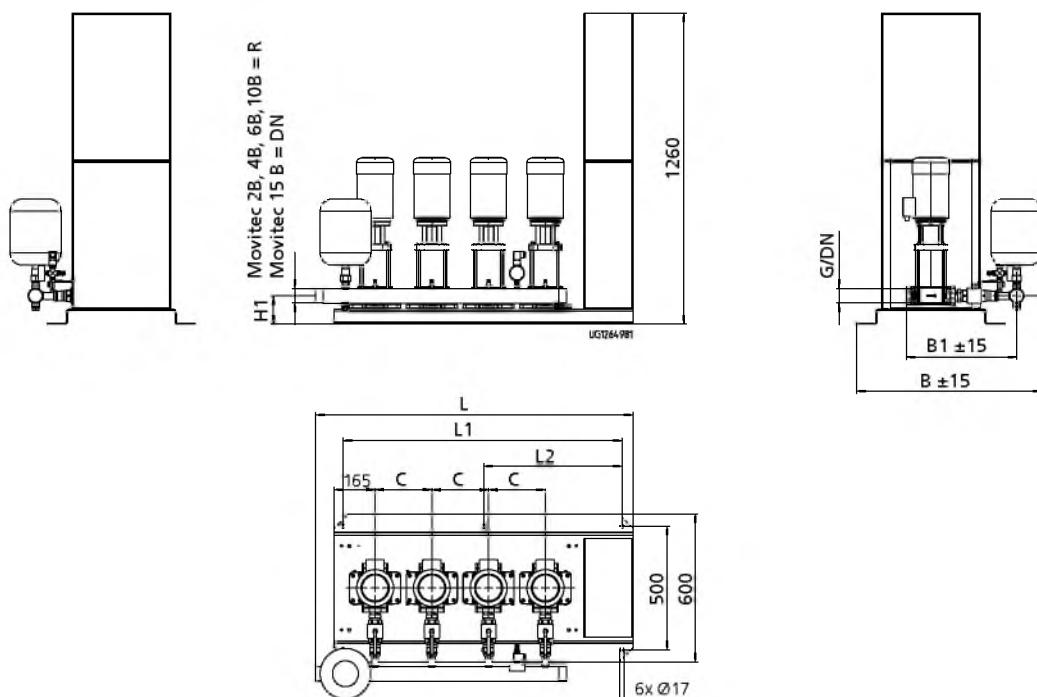

The actual curve will deviate from the documented curve due to the reduced speed. An accurate selection can only be made with KSB's selection program KSB EasySelect.

| St = 1 | P per stage

| St = -1 | P per stage with a smaller impeller

Scope of supply

Depending on the model, the following items are included in the scope of supply:

Pressure booster system

- Two to six vertical high-pressure centrifugal pumps (standard pumps)

For Movitec 2B, 4B, 6B, 10B and 15B:

- With oval/round flange

For Movitec 25B, 40B, 60B and 90B:

- With round flange
- Membrane-type accumulator on the discharge side, approved for drinking water
- Pressure transmitter on the discharge side
- Pressure gauge
- Powder-coated / epoxy resin-coated steel baseplate

For Movitec 2B, 4B, 6B, 10B and 15B:

- Pumps mounted on the baseplate with anti-vibration mounts

For Movitec 25B, 40B, 60B and 90B:

- Pressure booster system with level-adjustable feet and rubber pads (supplied but not fitted)

Per pump:

- Check valve
- Shut-off valves

Control cabinet

- Control cabinet IP54
- Pump control and monitoring unit
- Graphical display with operating panel
- LEDs indicating operational availability and fault of the pressure booster system
- Service interface for connection to a PC
- Transformer for control voltage
- Motor protection switch per pump

- Lockable master switch (repair switch)
- Terminal strip/terminals with identification for all connections
- Circuit diagram and list of electric components
- Connection for analog or digital dry running protection equipment
- External connection ON
- External connection OFF

Accessories

See the separate type series booklet Accessories for Pressure Booster Systems 1954.51.
